CLINICAL SIGNIFICANCE :  
HbA1c is a glycated form of haemoglobin formed by the attachment of glucose residues in the blood to the haemoglobin molecules. The level of HbA1c is proportional to the level of glucose in the blood & has been widely accepted as an indicator of the mean blood glucose concentration in the preceding 6-8 weeks. It is therefore a long term indicator of diabetic control. For routine use HbA1c levels should be monitored every 3-4 months.
