#### TEST REPORT Name : Mamta Vinay Maurya Ward : OPD : 4100100451 Lab ID Registration on : 26-Oct-2024 10:25 Age / Sex : 33 Years / Female Reported on : 26-Oct-2024 15:37 Reference Sample Type : EDTA Blood, Urine : Random, Fluoride Plasma Client : Velocity Hospital

### Mediwheel health package below 40- female

### Glycosylate Hemoglobin (HbA1C)

Parameters	Result	Unit	Biological Reference Interval
HbA1c (Glycosylated Hemoglobin)	5.29	%	< 6.0 : Normal 6.0 - 6.4 : Pre Diabetes > 6.5 : Diabetes
Mean Whole Blood Glucose	99.3	mg/dL	58 - 122
Fasting Blood Sugar			
Fasting Glucose-FBS	75.1	mg/dL	70 - 110

### Information:

\* HbA1c, also known as Glycated Hemoglobin is the most important test for the assessment of long term blood glucose

control (also called glycemic control)

\* HbA1c reflects mean blood glucose concentration over past 6-8 weeks and provides amuch better indication of long

term glycemic control than blood glucose determination

\* HbA1c is formed by non-enzymatic reaction between glucose and Hb., this reaction is irreversible and therefore remains unaffected by short term fluctuations in blood glucose levels.

\* Long term complications of diabetes such as retinopathy-eye complications, nephropathy-kidney complications and neuropathy-nerve complications, are potentially serious and can lead to blindness, kidney failure etc.

\* Glycemic control monitored by HbA1c measurement using HPLC method-(Gold Standard) is considered most important. (Ref. National Glycohemoglobin Standardization Program -NGSP).

Location	: SPECTRA DIA	GNOSTIC @ LP SAVANI ROAD		

Test Name	Results	Units	Bio. Ref. Interval	
	THYROID FUNC	TION TEST		
T3 (triiodothyronine), Total	0.96	ng/mL	0.6 - 1.81	
T4 (Thyroxine),Total	7.5	µg/dL	4.5 - 12.6	
TSH (Ultra Sensitive)	3.324	µIU/mL	0.55 - 4.78	

Sample Type:Serum

### Comments:

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-relasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

### TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 µIU/mL
- Second Trimester : 0.2 to 3.0 µIU/mL
- Third trimester : 0.3 to 3.0 µIU/mL

Location	: SPECTRA DIA	GNOSTIC @ LP SAVANI ROAD		

Test Name	Results	Units	Bio. Ref. Interval	
	THYROID FUNC	TION TEST		
T3 (triiodothyronine), Total	0.96	ng/mL	0.6 - 1.81	
T4 (Thyroxine),Total	7.5	µg/dL	4.5 - 12.6	
TSH (Ultra Sensitive)	3.324	µIU/mL	0.55 - 4.78	

Sample Type:Serum

### Comments:

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-relasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

### TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 µIU/mL
- Second Trimester : 0.2 to 3.0 µIU/mL
- Third trimester : 0.3 to 3.0 µIU/mL

### Glycosylate Hemoglobin (HbA1C)

Parameters	Result	Unit	<b>Biological Reference Interval</b>
HbA1c (Glycosylated Hemoglobin)	5.29	%	< 6.0 : Normal 6.0 - 6.4 : Pre Diabetes > 6.5 : Diabetes
Mean Whole Blood Glucose	99.3	mg/dL	58 - 122
Fasting Blood Sugar			
Fasting Glucose-FBS	75.1	mg/dL	70 - 110

### Information:

\* HbA1c, also known as Glycated Hemoglobin is the most important test for the assessment of long term blood glucose

control (also called glycemic control)

\* HbA1c reflects mean blood glucose concentration over past 6-8 weeks and provides amuch better indication of long

term glycemic control than blood glucose determination

\* HbA1c is formed by non-enzymatic reaction between glucose and Hb., this reaction is irreversible and therefore remains unaffected by short term fluctuations in blood glucose levels.

\* Long term complications of diabetes such as retinopathy-eye complications, nephropathy-kidney complications and neuropathy-nerve complications, are potentially serious and can lead to blindness, kidney failure etc.

\* Glycemic control monitored by HbA1c measurement using HPLC method-(Gold Standard) is considered most important. (Ref. National Glycohemoglobin Standardization Program -NGSP).
