### REMARKS:-

mean glucose  
patient's recent history  
for glycemia  
urinary glucose.

In vitro quantitative determination of **HbA1C** in whole blood is utilized in long term monitoring of glycemia .The **HbA1C** level correlates with the concentration prevailing in the course of the (approx - 6-8 weeks) and therefore provides much more reliable information monitoring than do determinations of blood glucose or

intervals of 4-6

It is recommended that the determination of **HbA1C** be performed at weeks during diabetes mellitus therapy.

Results of **HbA1C** should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.
