 Report Generated 08/03/2025 04:10 PM

Report Of Biochemistry Examination

Investigation	Result	Unit(s)	Reference Range
---------------	--------	---------	-----------------

GLUCOSE FASTING (FBS)

Plasma Glucose(F) Method (GOD-POD Method)	168	mg/dL	65 - 110
--	------------	-------	----------

Comments:

Fasting Blood Sugar/Glucose test a blood sample will be taken after an overnight fast. A fasting blood sugar level of less than 100mg/dL is normal. A fasting blood sugar level from 100 to 125 mg/dL is considered prediabetes. If it's 126 mg/dL or higher on two separate tests, you have diabetes.

Investigation was performed on BIOCHEMISTRY (FULLY AUTO ANALYSER)

GLUCOSE, POST PRANDIAL 2 HOURS

Plasma Glucose(PP) Method (GOD-POD Method)	234	mg/dL	75 - 140
---	------------	-------	----------

Note :

- The diagnosis of Diabetes requires a fasting plasma glucose of $>$ or $=$ 126 mg/dL and/or a random / 2 hr post glucose value of $>$ or $=$ 200 mg/dL on at least 2 occasions
- Very low glucose levels cause severe CNS dysfunction
- Very high glucose levels ($>$ 450 mg/dL in adults) may result in Diabetic Ketoacidosis & is considered critical

Investigation was performed on BIOCHEMISTRY (FULLY AUTOMATIC WET CHEMISTRY)

GLYCOSYLATED HAEMOGLOBIN

Whole blood HbA _{1c} Method (HPLC)	7.0	%	Non diabetic level($<$ 6.0) Goal($<$ 7.0)
Whole blood eAG (Estimated AverageGlucose Level) Method (CALCULATION)	154	mg/dl	-

Note:

The Parameter indicates control over the last 90 Days

In the Blood, glucose adheres to haemoglobin (Hb) and make Glycosylated haemoglobin/HbA_{1c}, which provides a clue about the average blood glucose level over the last 8-12 weeks and it is an indicator for chronic glycaemic control along with effects of drug, diet and exercise.

In normal individuals, 90% is the adult haemoglobin fraction and the rest 8% is formed by HbA. Reduction of HbA_{1c} value reduces diabetic and cardiological related morbidity and mortality.

The short life span of RBC in haemoglobinopathy and chemically modified derivatives of haemoglobin (carbamyated Hb in renal failure and acetylated Hb, who are taking aspirin) can affect the results. Iron

Report Of Biochemistry Examination

Investigation	Result	Unit(s)	Reference Range
---------------	--------	---------	-----------------

deficiency anaemia, liver disease, opiate addiction may interfere the test value. HPLC, ion exchange chromatography is the ideal method for HbA_{1c} estimation. The target goal is <7%. Besides HbA_{1c} serum fructosamine can be measured.

American diabetes association guideline

	Reference range
Non diabetic adult > 18 years	: < 5.7%
Pediabetes	: 5.7% - 6.4%
Diagnosing diabetes	: > 6.5%

Lipid Profile

Serum Triglyceride Method (Enzymatic, end point)	106.1	mg/dL	< 150
Serum Cholesterol Method (Oxidase, Esterase, Peroxidase)	185.0	mg/dL	125 - 200
Serum HDL-Chol Method (PTA/MgC12, Reflectance photometry)	46.25	mg/dL	30 - 65
Serum LDL-Chol Method (Direct Homogeneous, Spectrophotometry)	117.75	mg/dL	85 - 150
Serum VLDL-Chol	21	mg/dL	5 - 40
Serum LDL/HDL Cholesterol Ratio Method (Calculated)	2.55		1.5 - 3.5
Serum Cholesterol/ HDL Ratio Method (Calculated)	4.00		Low Risk(0 - 3) High Risk(5 - 10)

Interpretation :

NATIONAL LIPID ASSOCIATION RECOMMENDATIONS (NLA-2014)	TOTAL CHOLESTEROL in mg/dL	TRIGLYCERIDE in mg/dL	LDL CHOLESTEROL in mg/dL	NON HDL CHOLESTEROL in mg/dL
Optimal	<200	<150	<100	<130
Above Optimal	-	-	100- 129	130 - 159
Borderline High	200-239	150-199	130-159	160 - 189
High	>=240	200-499	160-189	190 - 219

Report Of Biochemistry Examination

Investigation	Result	Unit(s)	Reference Range
Very High	-	>=500	>=190
			>=220

Note :

- Measurements in the same patient can show physiological & analytical variations. Three serial samples 1 week apart are recommended for Total Cholesterol, Triglycerides, HDL & LDL Cholesterol.
- Lipid Association of India (LAI) recommends screening of all adults above the age of 20 years for Atherosclerotic Cardiovascular Disease (ASCVD) risk factors especially lipid profile. This should be done earlier if there is family history of premature heart disease, dyslipidemia, obesity or other risk factors.
- Indians tend to have higher triglyceride levels & Lower HDL cholesterol combined with small dense LDL particles, a pattern known as atherogenic dyslipidemia.
- Non HDL Cholesterol comprises the cholesterol carried by all atherogenic particles, including LDL, IDL, VLDL & VLDL remnants, Chylomicron remnants & Lp(a).
- LAI recommends LDL cholesterol as primary target and Non HDL cholesterol as co-primary treatment target.
- Apolipoprotein B is an optional, secondary lipid target for treatment once LDL & Non HDL goals have been achieved.
- Additional testing for Apolipoprotein B, hsCRP, Lp(a) & LP-PLA2 should be considered among patients with moderate risk for ASCVD for risk refinement

Investigation was performed on BIOCHEMISTRY (FULLY AUTO ANALYSER)

Liver Function Test (LFT)

Serum Bilirubin (Total) Method (By Diphylline, Diazonium Salt)	0.72	mg/dL	0.2 - 1.3
Serum Bilirubin (Direct) Method (Diphylline, Diazonium Salt)	0.33	mg/dL	0.1 - 0.4
Serum Bilirubin (Indirect) Method (Calculated)	0.39	mg/dL	0.2 - 1.1
Serum SGOT Method (IFCC)	26.2	U/L	17 - 59
Serum SGPT Method (IFCC)	42.8	U/L	21 - 72
Alkaline phosphatase (ALP) Method (IFCC)	148.5	U/L	Adult (38 - 126)
Serum Total Protein Method (Biuret Method)	6.4	g/dL	Adult(6.2 - 8.2) Children(5.6 - 8.4)

Report Of Biochemistry Examination

Investigation	Result	Unit(s)	Reference Range
Serum Albumin Method (BCG)	4.2	gm/dL	Newborn Children(2.4 - 4.8) Adult(3.5 - 5.0)
Serum Globulin Method (Calculated)	2.20	g/dL	Adult(2.3 - 3.6)
Serum A/G Ratio Method (BCG)	1.91		1.0 - 2.3

Note

1. In an asymptomatic patient, Non alcoholic fatty liver disease (NAFLD) is the most common cause of increased AST, ALT levels. NAFLD is considered as hepatic manifestation of metabolic syndrome.
2. In most type of liver disease, ALT activity is higher than that of AST; exception may be seen in Alcoholic Hepatitis, Hepatic Cirrhosis, and Liver neoplasia. In a patient with Chronic liver disease, AST:ALT ratio>1 is highly suggestive of advanced liver fibrosis.
3. In known cases of Chronic Liver disease due to Viral Hepatitis B & C, Alcoholic liver disease or NAFLD, Enhanced liver fibrosis (ELF) test may be used to evaluate liver fibrosis.
4. In a patient with Chronic Liver disease, AFP and Des-gamma carboxyprothrombin (DCP)/PIVKA II can be used to assess risk for development of Hepatocellular Carcinoma.

Investigation was performed on BIOCHEMISTRY (FULLY AUTO ANALYSER)

GAMMA GLUTAMYL TRANSFERASE (GGT)

Serum Gamma-Glutamyl Transferase	29	U/L	10 - 45
----------------------------------	----	-----	---------

Interpretation(s)

GAMMA GLUTAMYL TRANSFERASE, SERUM-

Gamma glutamyl transferase (GGT) is an enzyme found in cell membranes of many tissues mainly in the liver, kidney, and pancreas. It is also found in other tissues including intestine, spleen, heart, brain, and seminal vesicles. The highest concentration is in the kidney, but the liver is considered the source of normal enzyme activity. Serum gamma-glutamyl transferase (GGT) has been widely used as an index of liver dysfunction. Elevated serum GGT activity can be found in diseases of the liver, biliary system, and pancreas. Conditions that increase serum GGT are obstructive liver disease, high alcohol consumption, and use of enzyme-inducing drugs etc.

Kidney Function Test (KFT)

Serum Urea Method (GLDH,Kinetic Assay)	26.0	mg/dL	Adult (17 - 43) New Born (8.4 - 25.8) Infant (10.8 - 38.4)
---	------	-------	--

## Report Of Immunology Examination

| Investigation | Result | Unit(s) | Reference Range |
|---------------|--------|---------|-----------------|
|---------------|--------|---------|-----------------|

TSH measurement is used for screening & diagnosis of Euthyroidism, hypothyroidism & hyperthyroidism. Suppressed TSH ( $< 0.01 \mu\text{ IU/ml}$ ) suggests diagnosis of hyperthyroidism.

Elevated concentration of TSH ( $>7 \mu\text{ IU/ml}$ ) suggest diagnosis of hypothyroidism.

Please correlate clinically.

| Patient Name | Mr. KUMAR DEEPAK | Requested By | MEDIWHEEL |
| MRN | BER/2025/OPD | Procedure Date | 08.03.2025 |
| Age/Sex | 50 Y /Male | Hospital | Berlin Diagnostics & Day Care |

USG WHOLE ABDOMEN

Liver : The liver is enlarged in size (12.7 cm). It reveals diffuse fatty infiltration. No obvious focal lesion is seen. The intra and extra hepatic biliary passage are not dilated. The portal vein is normal in calibre at the porta hepatis.

Gall bladder : The gall bladder is normally distended, has normal wall thickness with no evidence of calculi.

CBD : The CBD is of normal calibre.

Pancreas : The pancreas is normal in size and echogenicity with distinct outline. No obvious focal lesion is seen.

Kidneys : Both kidneys were normal in position and measured as follows:

Right kidney measures 10.4 cm

Left kidney measures 8.8 cm

The renal cortical thickness and corticomedullary differentiation were adequate on both sides. No evidence of renal calculus or hydronephrosis seen on either side.

Spleen : The spleen is normal in size (7.1 cm) and echogenicity.

Urinary bladder : The urinary bladder is normally distended. It shows normal wall thickness. There is no evidence of any intraluminal or perivesical abnormality.

Prostate : The prostate is normal in size measuring 17.3 cm and showed a normal parenchymal echotexture.

No evidence of ascitis or lymphadenopathy seen.

No evidence of pleural effusion is seen on either side.

IMPRESSION: ENLARGED GRADE – II FATTY LIVER.

Dr. Poonam Choudhary
Sonologist.

X-RAY CHEST PA VIEW

OBSERVATIONS :

Both lung fields are clear.

Both hila are normal.

Both CP angles are normal.

Cardiac contour and size are within normal limits.

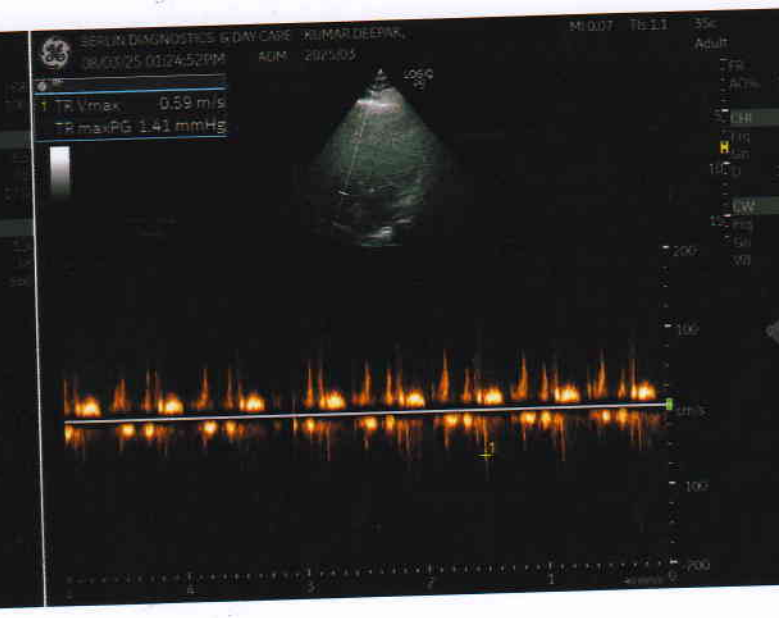

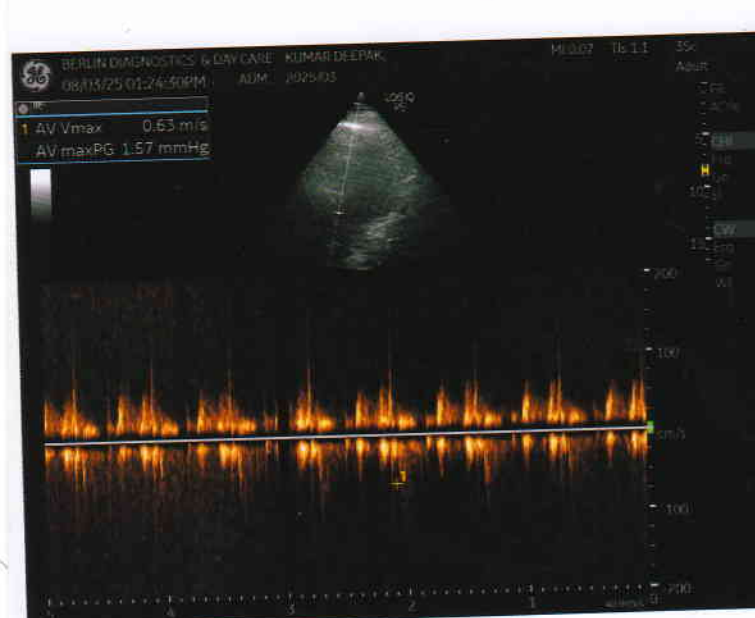

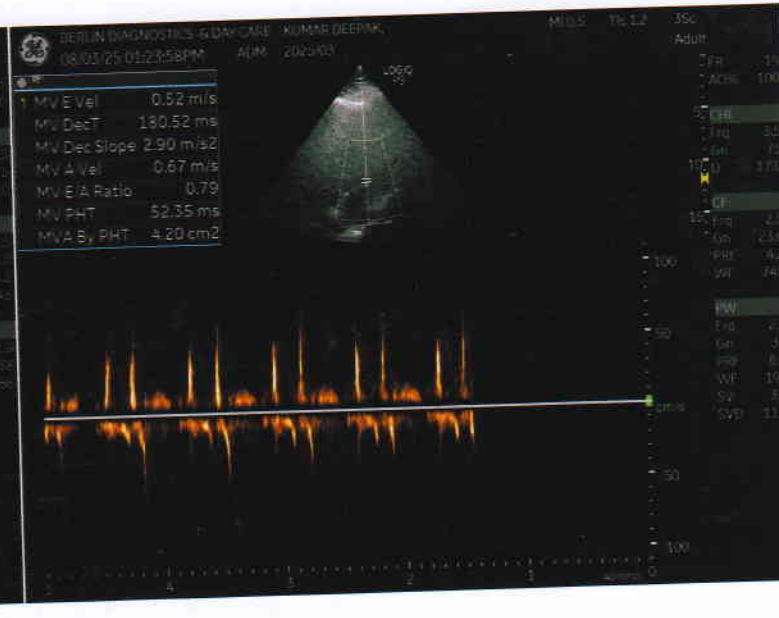

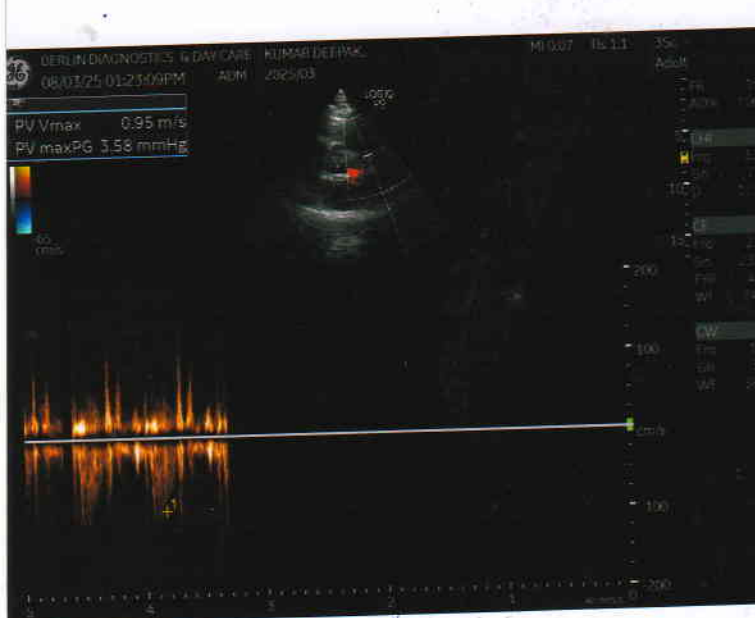

The bony rib cage is normal.

Soft tissue are normal.

IMPRESSION: NORMAL STUDY.

Dr. Ambuj Srivastav
M.D. Consultant Radiologist.

| MV PHT | 52.35 ms |
| MVA By PHT | 4.20 cm ² |
| AV Vmax | 0.63 m/s |
| AV maxPG | 1.57 mmHg |
| PV Vmax | 0.95 m/s |
| PV maxPG | 3.58 mmHg |
| TR Vmax | 0.59 m/s |
| TR maxPG | 1.41 mmHg |

Comments:

NORMAL LA, LV, RA AND RV SIZE, 2DEF= 56 %, NO RWMA , ALL VALVES AND PERICARDIUM NORMAL

Impression:

NORMAL LV SYSTOLIC AND RV FUNCTION IN NSR , NO PAH.
