HBA1C (Glycosylated Haemoglobin) : 5.2 %

<u>EXPECTED VALUES</u> :-	Metabolically healthy patients Good Control	:-	4.8 - 6.0 6.0 - 6.8	% %
	Fair Control	:-	6.8 - 8.2	%
	Poor Control	:-	>8.2	%

REMARKS:-

In vitro quantitative determination of **HbA1C** in whole blood is utilized in long term monitoring of glycemia .The **HbA1C** level correlates with the concentration prevailing in the course of the mean glucose patient's recent history (approx - 6-8 weeks) and therefore provides much more reliable information for glycemia monitoring than do determinations of blood glucose or urinary glucose. It is recommended that the determination of **HbA1C** be performed at intervals of 4-6 weeks during diabetes mellitus therapy. Results of **HbA1C** should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.
