INTERPRETATION::

The determination of T3 is utilized in the diagnosis of T3hyperthyroidism,the detection of early stages of hyperthyroidism and for indicating a diagnosis of thyrotoxicosis factitia.

The determination of T4 can be utilized for the following indications: the detection of hyperthyroidism, the detection of primary and secondary hypothyroidism, and the monitoring of TSH-suppression therapy.

The determination of TSH serves as the initial test in thyroid diagnostics.Even very slight changes in the concentrations of the free thyroid hormones bring about much greater opposite changes in the TSH level. Accordingly,TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid.
