DEPARTMENT OF CLINICAL CHEMISTRY I

Blood Urea Nitrogen (BUN)

Investigation	Observed Value	Units	Biological Reference Interval
Blood Urea Nitrogen.	9.8	mg/dL	7-23 mg/dL
Method:Calculated			

Interpretation: Urea is a waste product formed in the liver when protein is metabolized. Urea is released by the liver into the blood and is carried to the kidneys, where it is filtered out of the blood and released into the urine. Since this is a continuous process, there is usually a small but stable amount of urea nitrogen in the blood. However, when the kidneys cannot filter wastes out of the blood due to disease or damage, then the level of urea in the blood will rise. The blood urea nitrogen (BUN) evaluates kidney function in a wide range of circumstances, to diagnose kidney disease, and to monitor people with acute or chronic kidney dysfunction or failure. It also may be used to evaluate a person's general health status as well.

DEPARTMENT OF CLINICAL CHEMISTRY I

Creatinine, Serum

Investigation	Observed Value	Units	Biological Reference Interval
Creatinine.	1.00	mg/dL	0.60-1.30 mg/dL
Method:Alkaline Picrate			

Interpretation: Creatinine is a nitrogenous waste product produced by muscles from creatinine. Creatinine is majorly filtered from the blood by the kidneys and released into the urine, so serum creatinine levels are usually a good indicator of kidney function. Serum creatinine is more specific and more sensitive indicator of renal function as compared to BUN because it is produced from muscle at a constant rate and its level in blood is not affected by protein catabolism or other exogenous products. It is also not reabsorbed and very little is secreted by tubules making it a reliable marker. Serum creatinine levels are increased in pre renal, renal and post renal azotemia, active acromegaly and gigantism. Decreased serum creatinine levels are seen in pregnancy and increasing age.

DEPARTMENT OF CLINICAL CHEMISTRY I

Glycosylated Hemoglobin (HbA1C)

Investigation	Observed Value	Units	Biological Reference Interval
Glycosylated Haemoglobin Method:High Performance Liquid Chromatography(HPLC)	9.3	%	< 5.7% : Normal 5.7% - 6.4% : Prediabetes > 6.4% Diabetes
Mean Plasma Glucose (MPG) Estimate Method:Derived from HBA1c	220	mg/dL	Excellent Control : 90 to 120 Good Control : 121 to 150 Average Control : 151 to 180 Panic Value : > 211

Note:Mean Plasma Glucose is calculated from HBA1c value and it indicates Average Blood Sugar level over the past three months.

INTERPRETATION :

- Glycated hemoglobin (glycohemoglobin / HbA1c) is a form of hemoglobin (Hb) that is chemically linked to a sugar.
- A1c is measured primarily to determine the three-month average blood sugar level and can be used as a diagnostic test for diabetes mellitus and as an assessment test for glycemic control in people with diabetes.
- In diabetes, higher amounts of glycated hemoglobin, indicating poorer control of blood glucose levels, have been associated with cardiovascular disease, nephropathy, neuropathy, and retinopathy.
- American diabetes Association (ADA) recommends an A1C goal for many non pregnant adults of < 7% (without significant hypoglycemia). On the basis of provider judgment and patient preference, achievement of lower A1C levels than the goal of 7% may be acceptable, and even beneficial, if it can be achieved safely without significant hypoglycemia or other adverse effects of treatment. Less stringent A1C goals (such as < 8%) may be appropriate for patients with severe hypoglycemia, extensive co morbid conditions etc, or where the harms of treatment are greater than the benefits.
- Glycemic goals for some older adults might reasonably be relaxed as part of individualized care, but hyperglycemia leading to symptoms or risk of acute hyperglycemia complications should be avoided in all patients.

DEPARTMENT OF CLINICAL CHEMISTRY I Prostate Specific Antigen (PSA) Total

Investigation	Observed Value	Biological Reference Interval
Prostate Specific Antigen (PSA) Total	0.586	0-3.9 ng/mL
Method:Enhanced chemiluminescence		

Interpretation:

- 1.Prostate specific antigen (PSA) is a glycoprotein that is expressed by both normal and neoplastic prostate tissue
- 2.Elevated serum PSA concentrations are found in men with prostate cancer, benign prostatic hyperplasia (BPH) or inflammatory conditions of other adjacent genitourinary tissues. PSA can also be elevated after digital rectal examination,prostatic massage,cystoscopy,needle biopsy etc
- 3.Measurement of serum PSA by itself is not recommended as a screening procedure for the diagnosis of cancer because elevated PSA levels are also observed in patients with benign prostatic hyperplasia.
4. When employed for the management of prostate cancer patients, serial measurement of PSA is useful in detecting residual tumor and recurrent cancer after radical prostatectomy.
- 5.PSA has been demonstrated to be an accurate marker for monitoring advanced clinical stage in untreated patients and for monitoring response to therapy by radical prostatectomy, radiation therapy and anti-androgen therapy.

 Ref.By : - Collected on : 19-Nov-2024 / 08:51 AM
 Req.No  Reported on : 19-Nov-2024 / 11:34 AM
 BIL4957047 Reference : Medi Wheel

DEPARTMENT OF CLINICAL CHEMISTRY I

Thyroid Profile (T3,T4,TSH)

Investigation	Observed Value	Units	Biological Reference Interval
Triiodothyronine Total (T3) Method:Enhanced chemiluminescence	1.22	ng/mL	0.970-1.69 ng/mL
Thyroxine Total (T4) Method:Enhanced chemiluminescence	9.49	µg/dL	5.53-11.0 µg/dL
Thyroid Stimulating Hormone (TSH) Method:Enhanced chemiluminescence	3.99	µIU/mL	0.400-4.049 µIU/mL

Note: Change in method and reference range
NOTE:

TSH - Reference ranges during pregnancy:*

1st Trimester : 0.10 - 2.50

2nd Trimester : 0.20 - 3.00

3dr Trimester : 0.30 - 3.00

*As per the Guidelines of American Thyroid Association for the diagnosis and management of thyroid disease during pregnancy and post partum.

1.Primary Hyperthyroidism is accompanied by elevated T3 & T4 values along with depressed TSH level.

2.Primary Hypothyroidism is accompanied by depressed T3 & T4 levels and elevated TSH levels.

3.Normal T4 levels accompanied by high T3 levels are seen in patients with T3 Thyrotoxicosis.

4.Slightly elevated T3 levels may be found in pregnancy and estrogen therapy, while depressed levels may be encountered in severe illness, malnutrition, renal failure and during therapy with drugs like propranolol and propylthiouracil.

5.Although elevated TSH levels are nearly always indicative of primary hypothyroidism, rarely they can result form TSH secreting pituitary tumors(secondary).

DEPARTMENT OF CLINICAL CHEMISTRY I

Uric Acid, Serum

Investigation	Observed Value	Units	Biological Reference Interval
Uric Acid.	5.74	mg/dL	2.5-8.0 mg/dL
Method:Uricase			

Interpretation: It is the major product of purine catabolism. Hyperuricemia can result due to increased formation or decreased excretion of uric acid which can be due to several causes like metabolic disorders, psoriasis, tissue hypoxia, pre-eclampsia, alcohol, lead poisoning, acute or chronic kidney disease, etc. Hypouricemia may be seen in severe hepato cellular disease and defective renal tubular reabsorption of uric acid.

DEPARTMENT OF ULTRASOUND Ultrasound Whole Abdomen

LIVER : Normal in size and mild increased echotexture. No focal lesions.

No IHBD /CBD dilatation. Portal vein is normal in size.

SPLEEN : Normal in size and echotexture. No focal lesion seen.

GALL BLADDER : Well distended. No sludge / gall stones / sol.

Gall bladder -Wall thickness is normal.

No pericholecystic oedema.

PANCREAS : Not clearly imaged - Probably small in size - H/o Pancreatitis.

RIGHT KIDNEY : 8.4 x 3.7 cms

Normal in size and echotexture.

Cortical thickness is normal.

No evidence of calculi / sol.

Pelvi calyceal system is normal.

LEFT KIDNEY : 9.5 x 4.8 cms

Normal in size and echotexture.

Cortical thickness is normal.

No evidence of calculi / sol.

Pelvi calyceal system is normal.

URINARY BLADDER : Well distended. Normal in contour.

Wall thickness is normal. No calculus / sol.

PROSTATE : Measuring 3.6 x 2.7 x 2.5 cms (vol : 13.2 cc) Normal in size and echotexture.

No calcification / sol.

No pre or para aortic adenopathy / ascites noted.

IMPRESSION : Mild fatty liver - Grade I.
