

MEDICAL EXAMINATION REPORT

Date – 08/03/2025

Name : Munindra Deo.

Age : 49 years

Gender : Male

Measurements : Temp:98F, Height : 162cms ,Weight :72kg , BMI : 27.43%

Chest Measurements : Inspiration - 98cms, Expiration -96cms, Abdominal girth – 99 cms.

History : Nil significant history .

Past history : Not tested positive for Covid-19 infection till date.

2 doses vaccinated.

Personal history : Nil significant history .

Neurological history : Nil significant history .

Menstrual history : N.A.

Family history : Father - HTN.

Allergic history : Nil significant history.

Nature of work : Sedantary.

Occupational history : Assistant Manager at Union Bank of India .

Ongoing treatment : Nil significant history.

General examination : No Pallor ,No jaundice, clubbing, cyanosis, lymphadenopathy ,pedal oedema.

Built : Good .

Nutrition :Good.

Pulse : 82 bpm

B.P: 120/80mmHg

RS: Clear , NAD .

CVS: S1S2, NAD.

CNS: conscious, well oriented

PA: Soft,non-tender ,No organomegaly

Skin: NAD.

Musculoskeletal : NAD

Vision :	[R]	[L]	-Without glasses
	Distant : 6/6	Distant : 6/6	
	Near : N - 6	Near : N - 6	
	[R]	[L]	- With glasses

LABORATORY TEST REPORT

Patient Name **Mr MUNINDRA DEO**

Age : 49 Year(s) Gender : Male

Sample ID : 21248519

Sample Type : Serum

Patient ID : 2725783

Ref. Doctor :

Ref. Customer :

Lab Code : CPC-GO-020

Sample Collection Date : 2025-03-08 00:00

Registration Date : 2025-03-08 15:58

Approved Date : 2025-03-08 18:20

CLINICAL BIOCHEMISTRY

Test Description	Result	Units	Biological Reference Ranges
Thyroid Stimulating Hormone, (TSH) <small>(Method: Ultrasensitive Chemiluminescence TSH3rd generation)</small>	2.77	µIU/mL	0.37-5.50
Prostate Specific Antigen (PSA Total) <small>(Method: Chemiluminescence)</small>	0.385	ng/mL	0-4

INTERPRETATION

- This is a recommended test for detection of prostate cancer along with Digital Rectal Examination (DRE) in males above 50 years of age.
- False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy.
- PSA levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies & nonspecific protein binding.
- Immediate PSA testing following digital rectal examination, ejaculation, prostatic massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as they falsely elevate levels.
- PSA values regardless of levels should not be interpreted as absolute evidence of the presence or absence of disease. All values should be correlated with clinical findings and results of other investigations.
- Sites of Non-prostatic PSA production are breast epithelium, salivary glands, periurethral & anal glands, cells of male urethra & breast milk.
- Physiological decrease in PSA level by 18% has been observed in hospitalized / sedentary patients either due to supine position or suspended sexual activity.

Recommended Testing Intervals

- Pre-operatively (Baseline)
- 2-4 days post-operatively
- Prior to discharge from hospital
- Monthly followup if levels are high or show a rising trend

Clinical Use

- An aid in the early detection of Prostate cancer when used in conjunction with
- Digital rectal examination in males more than 50 years of age and in those with two or more affected first degree relatives.
- Followup and management of Prostate cancer patients
- Detect metastatic or persistent disease in patients following surgical or medical treatment of Prostate cancer

Increased Levels

- Prostate cancer
- Benign Prostatic Hyperplasia
- Prostatitis
- Genitourinary infections

0.37-5.50

Thyroid Function Test Interpretation

The thyroid gland is not functioning properly due to one of a variety of disorders, then increased or decreased amounts of thyroid hormones may result. When TSH concentrations are increased, the thyroid will make and release inappropriate amounts of T4 and T3 and the person may experience symptoms associated with hyperthyroidism. If there is decreased production of thyroid hormones, the person may experience symptoms of hypothyroidism.

The following table summarizes some examples of typical test results and their potential meaning.

TSH	Total T4	Total T3	Conditions
Normal	Normal	Normal	None
Low	High	High	Hyperthyroidism
High	Normal	Normal	Mild (subclinical) hypothyroidism
High	Low	Low or normal	Hypothyroidism
Low	Normal	Normal	Mild (Subclinical) hyperthyroidism
Low	High or normal	High or normal	Hyperthyroidism
Low	Low or normal	Low or normal	pituitary (secondary) hypothyroidism
Normal	High	High	Thyroid hormone resistance syndrome

Note:

- The above test results alone are not diagnostic but will prompt a health practitioner to perform additional testing to investigate the cause of the excess or deficiency and thyroid disorder. As examples, the most common cause of hyperthyroidism is Graves disease and the most common cause of hypothyroidism is Hashimoto thyroiditis.
- Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.
- Physiological rise in Total T3 / T4 levels is seen in pregnancy and in patients on steroid therapy.

Name : DEO MUNINDRA

Case ID : 916

Gender : Male

Date of Birth : 01/01/1976

Age : 49 Year(s), 2 Month(s), 7 Day(s)

Height : 0 cm(s)

BSA : 0

BP : 0/0 mmHg

Weight : 0.0 Kg(s)

BMI : 0

Date of Report : 08/03/2025

Date of Ultrasound : 08/03/2025 03:14:54 PM

Referred By : None

Reason for Ultrasound : Routine checkup

Examined By : Dr. Digambar Naik

Following observations were obtained

- LIVER** : Fatty changes: Grade I
- LEFT KIDNEY** : Is smoothly marginated.
Carticomedullary differentiation is maintained
No hydonephrosis
No abnormal growth seen
No calculi or calcinosis
- RIGHT KIDNEY** :
(1.5x1.1cm) cyst in the right kidney
- ADRENALS** : Not Enlarged
- PANCREAS** : Head, tail and body of the pancreas appear normal
- GALL BLADDER** : Is normal in size, shape and position
Wall is not thickened
No calculi
No polyp
- SPLEEN** : Is normal in size and overall echogenicity
Splenic vein is normal
No varieces
- AORTA** : Is well seen and is smooth
No aneurysmal dilatation
No calcification
- IVC** : Is normal in size
Collapses during inspiration
Contents clear
- URINARY BLADDER** : Is full
Normal bladder wall
No calculi
No growth
- LYMPH NODES** : No significant lymphadenopathy
- HERNIA** : No hernia seen

PROSTRATE : Normal in size and structure
INTESTINE : Small Intestines and Large Intestines are Normal
APPENDICITIS : Normal in size.
EO FLUID AND VISUAL BOWEL LOOPS : -

Impressions

Right renal cyst
Grade I fatty liver
