THYROID PANEL-I

| Test Name | Observed Values | Units | Biological Reference Intervals |
|---|-----------------|--------|--------------------------------|
| * TOTAL TRIIODOTHYRONINE (T3) Method:ECLIA | 1.29 | ng/mL | 0.82 - 2.0 |
| * TOTAL THYROXINE (T4) Method:ECLIA | 10.3 | ug/dl | 5.1 - 14.1 |
| * Thyroid Stimulating Hormone.(TSH) Method:ECLIA | 2.03 | µIU/mL | Adult : 0.35 – 5.5 |

INTREPRATATION:

The determination of T3 is utilized in the diagnosis of T3hyperthyroidism,the detection of early stages of hyperthyroidism and for indicating a diagnosis of thyrotoxicosis factitia.

The determination of T4 can be utilized for the following indications: the detection of hyperthyroidism, the detection of primary and secondary hypothyroidism, and the monitoring of TSH-suppression therapy.

The determination of TSH serves as the initial test in thyroid diagnostics.Even very slight changes in the concentrations of the free thyroid hormones bring about much greater opposite changes in the TSH level. Accordingly,TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid.

Vitamin Profile

| Test Name | Observed Values | Units | Biological Reference Intervals |
|--|-----------------|-------|---|
| * 25-OH VITAMIN (VIT D3) Method:ECLIA | 26.44 | ng/mL | Deficiency: <10 Insufficiency: 10-30 Sufficiency:30-100 Toxicity: >100 |
| * Vitamin - B12 Method:ECLIA | 612.3 | pg/mL | 211 - 946 |

INTERPRETATION::

Vitamin D is a nutrient that is essential for healthy bones and teeth. There are two forms of vitamin D that are important for nutrition: vitamin D2 and vitamin D3. Vitamin D2 mainly comes from fortified foods like breakfast cereals, milk, and other dairy items. Vitamin D3 is made by your own body when you are exposed to sunlight. It is also found in some foods, including eggs and fatty fish, such as salmon, tuna, and mackerel.

Vitamin D deficiency is due to:

Not getting enough exposure to sunlight

Not getting enough vitamin D in your diet

Having trouble absorbing vitamin D in your food

A low result may also observed due to body is having trouble using the vitamin as it should, and may indicate kidney or liver disease.

A vitamin D deficiency is usually treated with supplements and/or dietary changes.

Vitamin B12 is vital for good health. The body needs steady levels of Vitamin B12 nutrient to make enough red blood cells and keep the nervous system working. Common symptoms of low vitamin B12 include:

Fatigue

Fuzzy thinking

Numbness or tingling in your hands and feet

Headaches

Moodiness

USG REPORT - ABDOMEN AND PELVIS

LIVER: Is normal in size (13 cm) and fatty echotexture. No obvious focal lesion seen. No intra hepatic biliary radical dilatation seen.

GALL BLADDER: partially distended. No calculi/polyps/mass. CBD is not dilated.

PANCREAS: Appears normal in size and shows uniform echotexture in visualized portions. The pancreatic duct is normal. No calcifications are seen.

SPLEEN: Appears normal in size (10 cm) and it shows uniform echo texture.

KIDNEYS: Right kidney measures 9 x 4 cm, Left Kidney measures 9.8 x 4.8 cm. The shape, size and contour of both kidneys appear normal. Cortical echotexture is normal. Cortico medullary differentiation is maintained. No evidence of pelvicalyceal dilatation. No calculi seen.

URINARY BLADDER: is normally distended. No intraluminal echoes are seen. No calculus or diverticulum is seen.

PROSTATE: Measures 17 cc. Normal in size and echotexture.

No focal fluid collections seen.

IMPRESSION:

- Grade I fatty liver.
