Test Name	Value	Unit
HbA1c	5.5 %	%

### REFERENCE VALUES

Non-diabetic Level	<6%
Good Control	6 – 7 %
Fair Control	7 – 8 %
Unsatisfactory Control	8 – 10 %
Poor Control	> 10%

### SUMMARY & EXPLANATION OF THE TEST

Diabetes Mellitus is a leading cause of kidney failure, blindness and amputation in adults. It is also a major risk factor for heart disease, stroke and birth defects and shortens average life expectancy any up to 15 years. It is now well accepted that in patients with diabetes there is a direct relationship between blood sugar levels and complications associated with the disease.

The measurement of HbA1c is recommended for monitoring the long-term care of people with diabetes because the concentration of HbA1c within red blood cells reflects the average level of blood sugar over the previous 2-3 months. The level of HbA1c therefore rises proportionately in patients with higher levels of blood sugar, such as those with uncontrolled or undiagnosed diabetes.
