HEMOGLOBIN A1c TEST

Test	Observed Value	Unit	Biological Reference Interval
<u>HbA1</u> c	5.59	%	> 8 : Action Suggested 7-8 : Good control < 7 : Goal 6.0-7 : Near Normal Glycemia < 6.0 : Non-diabetic Level
Mean Blood Glucose	113.7	mg/dL	70.0 - 140.0

Importance of HbA1c - Glycated Hb. in Diabetes Mellitus

• HbA1c, also known as Glycated Hemoglobin is the most important test for the assessment of long term blood glucose control (also called glycemic control)

• HbA1c reflects mean blood glucose concentration over past 6-8 weeks and provides amuch better indication of long term glycemic control than blood glucose determination

• HbA1c is formed by non-enzymatic reaction between glucose and Hb., this reaction is irreversible and therefore remains unaffected by short term fluctuations in blood glucose levels.

• Long term complications of diabetes such as retinopathy-eye complications, nephropathy-kidney complications and neuropathy-nerve complications, are potentially serious and can lead to blindness, kidney failure etc.

• Glycemic control monitored by HbA1c measurement using HPLC method-(Gold Standard) is considered most important. (Ref. National Glycohemoglobin Standardization Program -NGSP).

		TEST REPORT		
Reg. No.	: 40700731465 F	leg. Date: 27-Jul-2024 13:41 Ref.No:	Approved On	: 27-Jul-2024 15:01
Name	: SUJIT R. BHAL	ERAO SUJIT	Collected On	: 27-Jul-2024 13:41
Age	: 35 Years	Gender: Male Pass. No. :	Dispatch At	:
Ref. By	:		Tele No.	:
Location	: SPECTRA DIA	GNOSTIC @ LP SAVANI ROAD		

Test Name	Results	Units	Bio. Ref. Interval	
THYROID FUNCTION TEST				
T3 (triiodothyronine), Total	1.37	ng/mL	0.6 - 1.81	
T4 (Thyroxine),Total	10.7	μg/dL	4.5 - 12.6	
TSH (Ultra Sensitive) By CLIA Method	1.134	µIU/mL	0.55 - 4.78	

Sample Type:Serum

Comments:

Thyroid stimulating hormone (TSH) is synthesized and secreted by the anterior pituitary in response to a negative feedback mechanism involving concentrations of FT3 (free T3) and FT4 (free T4). Additionally, the hypothalamic tripeptide, thyrotropin-relasing hormone (TRH), directly stimulates TSH production. TSH stimulates thyroid cell production and hypertrophy, also stimulate the thyroid gland to synthesize and secrete T3 and T4. Quantification of TSH is significant to differentiate primary (thyroid) from secondary (pituitary) and tertiary (hypothalamus) hypothyroidism. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels are low.

TSH levels During Pregnancy :

- First Trimester : 0.1 to 2.5 µIU/mL
- Second Trimester : 0.2 to 3.0 µIU/mL
- Third trimester : 0.3 to 3.0 µIU/mL

Location	: SPECTRA DIA	GNOSTIC @ LP SAVANI ROAD		

Test Name	Results	Units	Bio. Ref. Interval
Prostate Specific Antigen (PSA), Total	0.93	ng/mL	0 - 4

Method:CLIA

Sample Type:Serum

Useful For

1. Evaluating patients with documented prostate problems in whom multiple prostate-specific antigen tests may be necessary per year

2. Monitoring patients with a history of prostate cancer as an early indicator of recurrence and response to reatment.

3.Prostate cancer screening.

Comments

-Prostate-specific antigen (PSA) is a glycoprotein that is produced by the prostate gland, the lining of the urethra, and the bulbourethral gland. Normally, very little PSA is secreted in the blood. Increases in glandular size and tissue damage caused by benign prostatic hypertrophy, prostatitis, or prostate cancer may increase circulating PSA levels.

-Digital rectal examination generally does not increase normal prostate-specific antigen (PSA) values. However, cystoscopy, urethral instrumentation, and prostate biopsy may increase PSA levels.
