Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. The converse is true for a diabetic previously under good control but now poorly controlled.

2. Target goals of < 7.0 % may be beneficial in patients with a short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate.

Comments: HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

TSH (THYROID STIMULATING HORMONE) <i>Method : Chemiluminescence Microparticle Immunoassay</i> <i>Sample : Serum</i>	1.547	µIU/mL	0.35 - 4.94

Note: TSH levels are subject to circadian variation, reaching peak levels between 2 - 4. a.m. and at a minimum between 6-10 pm. The variation is of the order of 50% .hence time of the day influences the measured serum TSH concentrations.

Clinical Use

- Diagnose Hypothyroidism and Hyperthyroidism
- Monitor T4 replacement or T4 suppressive therapy
- Quantify TSH levels in the subnormal range

Increased Levels: Primary hypothyroidism, Subclinical hypothyroidism, TSH dependent Hyperthyroidism Thyroid hormone resistance

Decreased Levels: Graves' disease, Autonomous thyroid hormone secretion, TSH deficiency

T3 TOTAL (TRIIODOTHYRONINE) <i>Method : Chemiluminescence Microparticle Immunoassay</i> <i>Sample : Serum</i>	1.75	nmol/L	0.54 - 2.96
T4 TOTAL (THYROXINE) <i>Method : Chemiluminescence Microparticle Immunoassay</i> <i>Sample : Serum</i>	116.09	nmol/L	62.7 - 150.9
TSH (THYROID STIMULATING HORMONE) <i>Method : Chemiluminescence Microparticle Immunoassay</i> <i>Sample : Serum</i>	1.545	µIU/mL	0.35 - 4.94

Note: TSH levels are subject to circadian variation, reaching peak levels between 2 - 4. a.m. and at a minimum between 6-10 pm. The variation is of the order of 50% .hence time of the day influences the measured serum TSH concentrations.

Clinical Use

- Diagnose Hypothyroidism and Hyperthyroidism
- Monitor T4 replacement or T4 suppressive therapy
- Quantify TSH levels in the subnormal range

Increased Levels: Primary hypothyroidism, Subclinical hypothyroidism, TSH dependent Hyperthyroidism Thyroid hormone resistance
Decreased Levels: Graves' disease, Autonomous thyroid hormone secretion, TSH deficiency
