Specimen	Test Name / Method	Result	Units	Biological Reference Interval
----------	--------------------	--------	-------	-------------------------------

BIOCHEMISTRY

LIPID PROFILE

SERUM	TOTAL CHOLESTEROL (Enzymatic colorimetric (PHOD))	123	mg/dl	Desirable : < 200 Borderline: 200-239 High : > 239
-------	--	-----	-------	--

Notes : Elevated concentrations of free fatty acids and denatured proteins may cause falsely elevated HDL cholesterol results.

Abnormal liver function affects lipid metabolism; consequently, HDL and LDL results are of limited diagnostic value. In some patients with abnormal liver function, the HDL cholesterol result may significantly differ from the DCM (designated comparison method) result due to the presence of lipoproteins with abnormal lipid distribution.

BIOCHEMISTRY

FLOURIDE PLASMA	BLOOD GLUCOSE FASTING (Hexokinase)	92	mg/dl	70 - 110
-----------------	---------------------------------------	----	-------	----------

Notes : An early-morning increase in blood sugar (glucose) which occurs to some extent in all individuals, more relevant to people with diabetes can be seen (The dawn phenomenon) . Chronic Somogyi rebound is another explanation of phenomena of elevated blood sugars in the morning. Also called the Somogyi effect and posthypoglycemic hyperglycemia, it is a rebounding high blood sugar that is a response to low blood sugar.

Final Test Report

Specimen	Test Name / Method	Result	Units	Biological Reference Interval
----------	--------------------	--------	-------	-------------------------------

BIOCHEMISTRY

EDTA WHOLE BLOOD **GLYCOSYLATED HAEMOGLOBIN (HbA1C)**

HbA1C (High Performance Liquid Chromatography)	5.5	%(NGSP)	Non Diabetic Range: <= 5.6 Prediabetes :5.7-6.4 Diabetes: >= 6.5
ESTIMATED AVERAGE BLOOD GLUCOSE (Calculated)	111	mg/dl	

Notes : HbA1c reflects average plasma glucose over the previous eight to 12 weeks (1). The use of HbA1c can avoid the problem of day-to-day variability of glucose values, and importantly it avoids the need for the person to fast and to have preceding dietary preparations. HbA1c can be used to diagnose diabetes and that the diagnosis can be made if the HbA1c level is =6.5% (2). Diagnosis should be confirmed with a repeat HbA1c test, unless clinical symptoms and plasma glucose levels >11.1mmol/l (200 mg/dl) are present in which case further testing is not required.

HbA1c may be affected by a variety of genetic, hematologic and illness-related factors (Annex 1, https://www.who.int/diabetes/publications/report-hba1c_2011.pdf) (3). The most common important factors worldwide affecting HbA1c levels are haemoglobinopathies (depending on the assay employed), certain anaemias, and disorders associated with accelerated red cell turnover such as malaria.

IMMUNOLOGY

Notes : TSH is formed in specific cells of the anterior pituitary gland and is subject to a circadian Variation. The Release of TSH is the central regulating mechanism for the biological action of thyroid hormones. TSH has a stimulating action in all stages of thyroid hormone (T3/T4) formation and secretion and it also has a growth effect on Thyroid gland. Even very slight changes in the concentrations of the free thyroid hormones (FT3/FT4) bring about much greater opposite changes in the TSH level. The determination of TSH serves as the initial test in thyroid diagnostics. (1)

Patterns of Thyroid Function Tests (2)

- Low TSH, Low FT4 - Central hypothyroidism.
- Low TSH, Normal FT4, Normal FT3- Subclinical hyperthyroidism.
- Low TSH, High FT4- Hashimoto's thyroiditis, Grave's disease, Molar pregnancy, Choriocarcinoma, Hyperemesis, Thyrotoxicosis, Lithium, Multinodular goiter, Toxic adenoma, Thyroid carcinoma, Iodine ingestion.
- Normal TSH, Low FT4- Hypothyroxinemia, Nonthyroidal illness, Possible secondary hypothyroidism, Medications.
- Normal TSH, High FT4- Euthyroid hyperthyroxinemia, Thyroid hormone resistance, Familial dysalbuminemic hyperthyroxinemia, Medications (Amiodarone, beta-blockers, Oral contrast), Hyperemesis, Acute psychiatric illness, Rheumatoid factor.
- High TSH, Low FT4- Primary hypothyroidism.
- High TSH, Normal FT4- Subclinical hypothyroidism, Nonthyroidal illness, Suggestive of follow-up and recheck.
- High TSH, High FT4- TSH mediated hyperthyroidism

Note:

1. Isolated Low TSH -especially in the range of 0.1 to 0.4 often seen in elderly & associated with Non-Thyroidal illness
2. Isolated High TSH especially in the range of 4.7 to 15 uIU/ml is commonly associated with Physiological & Biological TSH Variability.
3. Normal changes in thyroid function tests during pregnancy include a transient suppression of thyroid-stimulating hormone. T4 and total T3 steadily increase during pregnancy to approximately 1.5 times the non-pregnant level. Free T4 and Free T3 gradually decrease during pregnancy

Final Test Report

Specimen	Test Name / Method	Result	Units	Biological Reference Interval
----------	--------------------	--------	-------	-------------------------------

CLINICAL PATHOLOGY

Urine URINE ANALYSIS

PHYSICAL EXAMINATION

VOLUME (Volumetric)	30		
COLOR (Visual Examination)	AMBER		
APPEARANCE (Visual Examination)	CLEAR		

CHEMICAL EXAMINATION

SP.GRAVITY (Indicator System)	1.020		1.005 - 1.030
REACTION(pH) (Double indicator)	ACIDIC		
PROTEIN (Protein-error-of-Indicators)	ABSENT		
GLUCOSE (GOD-POD)	ABSENT		Absent
KETONES (Legal's Test)	ABSENT		Absent
OCCULT BLOOD (Peroxidase activity)	ABSENT		Absent
BILIRUBIN (Fouchets Test)	ABSENT		Absent
UROBILINOGEN (Ehrlich Reaction)	NORMAL		
NITRITE (Griess Test)	ABSENT		

MICROSCOPIC EXAMINATION

ERYTHROCYTES (Microscopy)	ABSENT	/hpf	0-2
PUS CELLS (Microscopy)	2-4	/hpf	0-5
EPITHELIAL CELLS (Microscopy)	1-2	/hpf	0-5
CASTS (Microscopy)	ABSENT		
CRYSTALS (Microscopy)	ABSENT		
ANY OTHER FINDINGS	NIL

Name : SWAPNIL BAJPAI	Age : 31YRS
Gender : MALE	Date : 29/03/2024

X-RAY CHEST PA VIEW

X-ray of the chest in P.A. projection reveals that the bony thorax is normal.

Lung fields and pleural spaces are clear on both sides.

The silhouettes of the heart and aorta are normal in size and configuration.

Both domes of the diaphragm are normal in position, contour and outline.

IMPRESSION: NO EVIDENCE OF ANY DISEASE IS SEEN IN THE CHEST.
