**THYROID PROFILE, TOTAL, SERUM**

Method	Result	Flag	Unit	Reference Range	Machine Name
ECLIA					Vitros ECI
T3, Total	1.50		ng/ml	0.8-2.0	
T4, Total	11.6		µg/dL	5.10-14.10	
TSH (Ultrasensitive)	4.87	H	mIU/mL	0.27-4.2	

**Interpretation:**

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.
2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
3. Unbound fraction ( Free,T4 /Free,T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals.
