### Blood Group & RH Factor

SPECIMEN	WHOLE BLOOD
ABO GROUP	O
RH FACTOR	POSITIVE
INTERPRETATION	

The ABO system consists of A, B, AB, and O blood types. People with type AB blood are called universal recipients, because they can receive any of the ABO types. People with type O blood are called universal donors, because they can donate blood to people with any of the ABO types.

Mismatching with the ABO and Rh blood types can be the most serious, sometimes life-threatening, blood transfusion reactions. But these types of reactions are rare.

#### Rh system

The Rh system classifies blood as Rh-positive or Rh-negative, based on the presence or absence of Rh and certain other factors. People with Rh-positive blood can receive Rh-negative blood, but people with Rh-negative blood will have a transfusion reaction if they receive Rh-positive blood. In addition, during pregnancy, mismatched Rh blood types can be serious.

-----------	--------	------	-----------------

Prostate Specific Antigen, Total, Serum	0.39	ng/ml	0.0 - 4.0
---	------	-------	-----------

### Clinical significance:

Prostate Specific Antigen (PSA) is a protein produced by the prostate gland. It is used as a marker for prostate cancer. PSA levels are measured in ng/ml. A PSA level of 0.0 to 4.0 ng/ml is considered normal. A PSA level of 4.0 to 10.0 ng/ml is considered suspicious for prostate cancer. A PSA level of 10.0 ng/ml or higher is considered a strong indicator of prostate cancer. PSA levels can also be elevated in benign prostatic hyperplasia (BPH) and prostatitis.

**X-RAY CHEST PA VIEW (PORTABLE)**

**FINDINGS:**

Normal bronchovascular markings in bilateral lung fields.  
Bilateral hila are normal.  
Trachea appears normal.  
Cardiac shadow is within normal limits.  
The domes of diaphragm are normal in position and shows smooth outline.  
Bilateral costophrenic angles are clear.  
Visualized bones are grossly normal.  
Visualised soft tissue shadows are normal.

**IMPRESSION:**

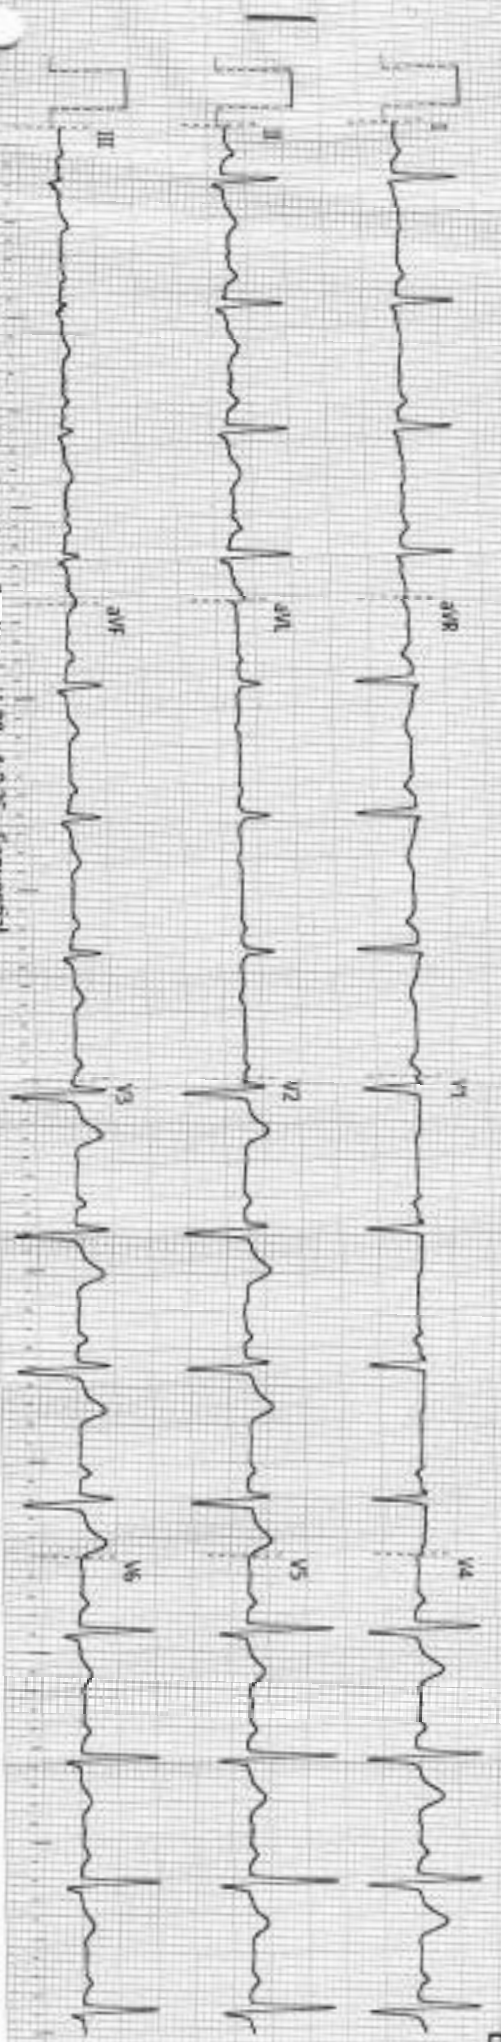

- No significant abnormality detected
