The Glycosylated haemoglobin assay has been validated as a reliable indicator of mean blood glucose levels for a 3 months period. AMERICAN DIABETES ASSOCIATION recommends the testing twice an year in patients with stable blood glucose, and quarterly if treatment changes or blood glucose is abnormal

BLOOD SUGAR (PP),Serum

SUGAR PP	120.7	mg/dl	80 - 140
----------	-------	-------	----------

Comments:

Accurate measurement if glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate)	03	mm/1hr	00 - 22
--------------------------------------	----	--------	---------

Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

Test Name	DEPARTMENT OF HORMONE ASSAYS			
	Result	Unit	Bio. Ref. Range	Method
THYROID PROFILE (FT3, FT4, TSH)				
Sample Type : SERUM				
FT3	3.26	pg/ml	2.30-4.20	CLIA
FT4	15.6	pmol/L	10.0-22.0	CLIA
TSH	1.08	uIU/mL	0.35-5.50	CLIA

INTERPRETATION:

- Measurement of Free T3 is often employed to help confirm a diagnosis of hypothyroidism where an elevated free or total T4 has been encountered.
- Free thyroxine (FT4) is a better indicator of thyroid hormone action as it is not affected by changes in thyroxine binding globulin. In mild to moderate systemic illness, FT4 is generally normal or slightly raised and TSH is normal in patients without thyroid disease.
- Low levels of thyroid hormones (FT3, FT4) are seen in cases of primary, secondary and tertiary hypothyroidism and sometimes in nonthyroidal illness also.
- Increased levels are found in Graves's disease, hyperthyroidism and thyroid hormone resistance.
- TSH levels are raised in primary hypothyroidism and are low in hyperthyroidism and secondary hypothyroidism.

In Pregnancy, reference range for FT3 in pg/mL:
 First trimester- 2.11-3.83
 Second and Third trimester- 1.96-3.38

In Pregnancy, reference range for FT4 in ng/dL:
 First trimester- 0.7-2.0
 Second and Third trimester- 0.5-1.6

(Pregnancy reference values as per American Thyroid Association)

NOTE:

-TSH levels are subject to circadian variation, reaches peak levels between 2-4 AM and is at a minimum between 6-10 PM. The variation of the day has influence on the measured serum TSH concentrations.

Note

Ultra-TSH-Reference range is 0.550 to 4.780 uIU/ml

TSH (total) - Reference range is 0.35 to 5.50 uIU/ml

These values may be compared accordingly
