| Triglycerides<br>(Serum/Glycerol phosphate oxidase / peroxidase) | 73                              | mg/dL       | Optimal: < 150<br>Borderline: 150 - 199<br>High: 200 - 499<br>Very High: >=500 |

**INTERPRETATION:** The reference ranges are based on fasting condition. Triglyceride levels change drastically in response to food, increasing as much as 5 to 10 times the fasting levels, just a few hours after eating. Fasting triglyceride levels show considerable diurnal variation too. There is evidence recommending triglycerides estimation in non-fasting condition for evaluating the risk of heart disease and screening for metabolic syndrome, as non-fasting sample is more representative of the "usual" circulating level of triglycerides during most part of the day.

| Non HDL Cholesterol<br>(Serum/ <i>Calculated</i> ) | 90.0                            | mg/dL       | Optimal: < 130<br>Above Optimal: 130 - 159<br>Borderline High: 160 - 189<br>High: 190 - 219<br>Very High: >= 220 |

**INTERPRETATION:** 1.Non-HDL Cholesterol is now proven to be a better cardiovascular risk marker than LDL Cholesterol. 2.It is the sum of all potentially atherogenic proteins including LDL, IDL, VLDL and chylomicrons and it is the "new bad cholesterol" and is a co-primary target for cholesterol lowering therapy.

|---------------------------|--------|-------|
|---------------------------|--------|-------|

(Whole Blood)

#### **INTERPRETATION:** Comments

HbA1c provides an index of Average Blood Glucose levels over the past8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

Conditions that prolong RBC life span like Iron deficiency anemia, Vitamin B12 & Folate deficiency,

hypertriglyceridemia, hyperbilirubinemia, Drugs, Alcohol, Lead Poisoning, Asplenia can give falsely elevated HbA1C values.

Conditions that shorten RBC survival like acute or chronic blood loss, hemolytic anemia, Hemoglobinopathies, Splenomegaly, Vitamin E ingestion, Pregnancy, End stage Renal disease can cause falsely low HbA1c.

| BUN / Creatinine Ratio                          | 13.3                            |             | 6 - 22                                                       |  |
| Glucose Fasting (FBS)<br>(Plasma - F/GOD - POD) | 92                              | mg/dL       | Normal: < 100<br>Pre Diabetic: 100 - 125<br>Diabetic: >= 126 |  |

**INTERPRETATION:** Factors such as type, quantity and time of food intake, Physical activity, Psychological stress, and drugs can influence blood glucose level.

| Glucose Fasting - Urine     | Negative | Negative |
|-----------------------------|----------|----------|
| (Urine - F)                 |          |          |
| Glucose Postprandial (PPBS) | 81 mg/dL | 70 - 140 |
| (Plasma - PP/GOD - POD)     |          |          |

#### **INTERPRETATION:**

Factors such as type, quantity and time of food intake, Physical activity, Psychological stress, and drugs can influence blood glucose level. Fasting blood glucose level may be higher than Postprandial glucose, because of physiological surge in Postprandial Insulin secretion, Insulin resistance, Exercise or Stress, Dawn Phenomenon, Somogyi Phenomenon, Anti- diabetic medication during treatment for Diabetes.

| Glucose Postprandial - Urine<br>(Urine - PP)     | Negative  | Negative  |
|--------------------------------------------------|-----------|-----------|
| Blood Urea Nitrogen (BUN)<br>(Serum/Urease-GLDH) | 8 mg/dL   | 7.0 - 21  |
| Creatinine                                       | 0.6 mg/dL | 0.6 - 1.1 |

#### (Serum/Jaffe Kinetic)

**INTERPRETATION:** Elevated Creatinine values are encountered in increased muscle mass, severe dehydration, Pre-eclampsia, increased ingestion of cooked meat, consuming Protein/ Creatine supplements, Diabetic Ketoacidosis, prolonged fasting, renal dysfunction and drugs such as cefoxitin ,cefazolin, ACE inhibitors ,angiotensin II receptor antagonists,N-acetylcyteine , chemotherapeutic agent such as flucytosine etc.

| Uric Acid                  | 2.6 | mg/dL | 2.6 - 6.0 |

## ABDOMINO-PELVIC ULTRASONOGRAPHY

**LIVER** is normal in shape, size (11.7cm) and has uniform echopattern. No evidence of focal lesion or intrahepatic biliary ductal dilatation. Hepatic and portal vein radicals are normal.

**GALL BLADDER** show normal shape and has clear contents. Wall is of normal thickness. CBD is of normal calibre.

**PANCREAS** has normal shape, size and uniform echopattern. No evidence of ductal dilatation or calcification.

**SPLEEN** show normal shape, size (9.1cm) and echopattern.

No demonstrable Para-aortic lymphadenopathy.

#### **KIDNEYS**

**Right kidney:** Normal in shape, size and echopattern. Cortico-medullary differentiation is well madeout. No evidence of calculus or hydronephrosis.

**Left kidney:** Normal in shape, size and echopattern. Cortico-medullary differentiation is well madeout. No evidence of calculus or hydronephrosis.

The kidney measures as follows:

| -            | Bipolar length (cm) | Parenchymal thickness (cm) |
|--------------|---------------------|----------------------------|
| Right Kidney | 9.8                 | 1.5                        |
| Left Kidney  | 10.7                | 1.6                        |

**URINARY BLADDER** show normal shape and wall thickness. It has clear contents. No evidence of diverticula.

**UTERUS** is anteverted and has normal shape and size. It has uniform myometrial echopattern. Endomyometrial junction is indistinct.

Endometrium measures - 10.7mm.

Uterus measures LS: 8.6 cm AP: 4.5 cm TS: 5.2 cm.

**OVARIES** are bulky and shows multiple subcentimeter sized peripherally arranged follicle with echogenic stroma.

Right ovary measures 4.7 x 2.3 x2 .3cms (Volume: 13.7cc) Left ovary measures 4.1 x 2.3 x 2 .5cms (Volume: 12.7cc)

POD & adnexa are free. No evidence of ascites. **IMPRESSION:** 

### • Features of polycystic ovaries.

Suggested clinical & hormonal correlation.
