DEGREE.

Aerobic culture

Method:

Note: URINE CULTURE:

Presence of >105 cfu/ml (100000) in midstream urine sample is considered clinically significant. However in sympto matic patients or urine sample collection from catheter or patients with indwelling catheters, even a smaller count of b acteria may signify infection (100-10000cfu/ml). Kindly correlate clinically.

Method: chemiluminescent immunoassay

Note: Clinical Significance:

Thyroid function tests (TFTs) is a collective term for blood tests used to check the function of the thyroid.TFTs may b e requested if a patient is thought to suffer from hyperthyroidism (overactive thyroid) or hypothyroidism (underactive t hyroid), or to monitor the effectiveness of either thyroid-

suppression or hormone replacement therapy. It is also requested routinely in conditions linked to thyroid disease, su ch as atrial fibrillation and anxiety disorder. A TFT panel typically includes thyroid hormones such as thyroidstimulating hormone (TSH, thyrotropin) and thyroxine (T4), and triiodothyronine (T3) depending on local laboratory p olicy.

Note: Please correlate with clinical condition

AW-CYTOLOGY

Test

ResultUnit

Pap Smear

CYTOPATHOLOGY No.: C-1581/23

SPECIMEN SUBMITTED: 2 Conventional cervical smears.

SPECIMEN ADEQUACY: Satisfactory for evaluation; Endocervical /transformation zone component absent.

MICROSCOPIC EXAMINATION:

Squamous cell population:

Superficial - Present.

Intermediate - Present.

Inflammation - Moderate.

Atypical cells - Not present.

Background bacterial flora - Maintained.

INTERPRETATION:

- Negative for squamous intraepithelial lesion or malignancy.
- Inflammation with associated reactive cellular changes.

COMMENT:

- 1. The smears are reported using the Bethesda system (2014) for reporting cervical cytology.
- 2. Cervical cytology is a screening test primarily for squamous cancer and its precursors and has associated false-negative and false-positive results. Technologies such as liquid-based preparations may decrease but will not eliminate all false negative results. Follow-up of unexplained clinical signs and symptoms is recommended to minimize false-negative results.
- 3. In patients with squamous or glandular intraepithelial abnormalities, further diagnostic follow-up procedures, such as HPV testing, colposcopy / biopsy with endocervical sampling are suggested, as clinically indicated.

USG WHOLE ABDOMEN

The real time, B mode, gray scale sonography of the abdominal organs was performed.

LIVER: The liver is normal in size(12.8cm), shape and echotexture. No evidence of any focal lesion. IHBR is not dilated.

GALL BLADDER: The gall bladder is well distended. No evidence any calculus or mass seen. GB wall thickness with in normal limits. No evidence of pericholecystic fluid.

BILE DUCT : The common bile duct is normal in caliber. No evidence of calculus is noted in common bile duct.

SPLEEN: The spleen is normal in size(10.2cm) and shape. Its echotexture is homogeneous. No evidence of focal lesion.

PANCREAS: The pancreas is normal in size, shape, contours and echotexture. No evidence of solid or cystic mass lesion is noted.MPD is not dilated. No evidence of peripancreatic collection.

KIDNEYS: The bilateral kidneys are normal in size and echotexture. Cortico-medullary differentation is maintained. There is no evidence of obvious calculus or hydronephrosis.

URINARY BLADDER: The urinary bladder is partially distended. It shows uniformly thin walls and sharp mucosa. No evidence of calculus is seen. No evidence of mass or diverticulum.

UTERUS: The uterus is retroflexed. It measures 6.3x4.3x4.4cms. in the longitudinal, anteroposterior and transverse dimensions respectively. The uterine margins are smooth and does not reveal any contour abnormalities.

The uterine myometrium shows homogeneous echotexture.

Few nabothian cysts seen in cervix, largest of size 6mm.

The endometrial echo is in the midline and measures 10.5mm.

The ovaries on the either side show normal echotexture.

No adnexal mass is seen. No cyst is seen in ovaries.

Right ovary measures: 2.7x1.7cm.

Left ovary measures : 2.8x2.0cm.

No evidence of ascites or interbowel free fluid is seen.

No evidence of obvious retroperitoneal or mesentric lymphadenopathy is seen.

Bowel loop distended with gas.

IMPRESSION - No significant abnormalities noted.

To be correlated clinically.
