HbA1c [Glycosylated Haemoglobin]

<u>Test</u>	<u>Result</u>	<u>Unit</u>	<u>Reference Range (%)</u>
Glycosylated Haemoglobin : 5.3 (HbA1c)		%	Non Diabetic Level: 4 - 6 Therapy Range: <7 Change of Therapy: >8
Estimated Average glucose : 105.41		mg/dl	70-126

Method : By HPLC (Performed on Biorad D10)

Interference:

- Elevated fetal haemoglobin (HbF) variant may cause falsely elevated HbA1c result.
- Conditions that shortens RBC life span (e.g. recovery from acute blood loss, hemolytic anemia) will falsely lower HbA1c test results.
- Iron deficiency anemia is associated with higher HbA1c concentration and iron replacement therapy lowers HbA1c concentrations.
- Clinical correlation and alternate methods of glucose estimation should be consider in above interference cases.

Prostate specific antigen - PSA

Test

	<u>Result</u>	<u>Units</u>	<u>Normal Range</u>
Prostate Specific Antigen (PSA)	: 1.00	ng/ml	[0.0 - 4.0]

- Generally recommended in : prostatic malignancy
- Schedule for tumour marker determination
Pre-operatively
Post operatively - At regular intervals until the values have shown a marked decrease.
- Potential clinical applications of tumour markers are :

Prognosis - The level of tumour marker is corresponds to the mass of tumour. Moderate elevations are suggestive of better prognosis than persistent high levels.

Monitoring - The profile of tumour marker concentration against time can mirror the condition of patients diagnosed to have cancer.

Tumour marker profile usually reflects one of the following classical patterns :

A rapid decline in the concentration following surgery or therapy indicates successful treatment
The lack of a decline to basal level following first line therapy indicates partial success in the treatment.

Continue low level of the tumour marker indicates that remission has been maintain.

A subsequent rise in the concentration of the tumour marker suggests a recurrence of the disease.

If tumour marker concentration remain elevated after treatment, the tumour may be resistant to the therapeutic method and prognosis is poor.
