 Print Dt. 28/07/2023 23:22:59
 UID : P10100015125

Test Name	Result	Unit	Biological Ref Interval
1510-HbA1c (glyco HB) <small>SP- Whole Blood Method.HPLC</small>	9.7	%	4.0 - 5.7

EXPECTED VALUES :-

Guidance for Non diabetics	
Metabolically healthy patients	4.0 - 6.0 %
Good Control	6.0 - 7.0 %
Fair Control	7.0 - 8.0 %
Poor Control	> 8.0 %

Reference Range as per ADA Guidelines	
Below 5.7 %	Normal
5.8 - 6.4 %	Pre-diabetic
≥ 6.5 %	Diabetic

REMARKS :-

● *in vitro* quantitative determination of HbA1c in whole blood is utilized. In long term monitoring of glycemia. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6 - 8 weeks) and therefore provides determination of blood glucose or urinary glucose. It is recommended that the determination of HbA1c be performed at intervals of 4 - 6 weeks during diabetes mellitus therapy. Result of HbA1c should be assessed in conjunction with the patient's medical history clinical examination and other findings.

1559-THYROID PROFILE

1560-TOTAL TRIIODOTHYRONINE (T3) Direct Chemiluminometric Technology	1.31	ng/ml	0.60 - 1.81
1561-TOTAL THYROXINE (T4) Direct Chemiluminometric Technology	8.6	ug/dl	5.5 - 12.5
1562-THYROID STIMULATING HORMONES (TSH) Sandwich CLIA	4.87	uIU/ml	0.50 - 5.00

INTERPRETATION:

THYROID STIMULATING HORMONE (TSH)

The TSH levels are inversely related to T3 & T4 levels. In primary hypothyroidism TSH levels are high while T3&T4 levels are low whereas in primary hyperthyroidism TSH levels are low with high T3&T4 levels. A low T3 & T4 in the presence of low or normal TSH indicates hypothalamic or pituitary dysfunction. A high TSH in th presence of normal or high T4 suggests in appropriated TSH secretion.

INCREASED LEVELS are seen in primary hypothyroidism, inappropriate TSH secretion, systemic illness,rarely in TSH secreting pituitary tumours (secondary hyperthyroidism).

DECREASED LEVELS are seen in secondary hypothyroidism, Hyperthyroidism.

INTERPRETATION:

Serum T3.T4,TSH measurements from the three components of Thyroid screening panel.

TRIIODOTHYRONINE (T3)

INCREASED LEVELS are seen in graves disease,T3 thyrotoxicosis,Thyroid hormone resistance,Functional thyroid adenoma.
 DECREASED LEVELS are seen IN Nonthyroidal illness,Hypothyroidism (one third cases)

THYROXINE (T4) - Normal T4 levels accomplished by elevated T3 levels seen in T3 Thyroxiosis.
 INCREASED LEVELS are seen in hyperthyroidism,Thyroid hormone resistance.

UID : P10100015125

DECREASED LEVELS are seen in Primary hypothyroidism, secondary hypothyroidism.

THYROID STIMULATING HORMONE (TSH)

The TSH levels are inversely related to T3 & T4 levels. In primary hypothyroidism TSH levels are high while T3&T4 levels are low whereas in primary hyperthyroidism TSH levels are low with high T3&T4 levels. A low T3 & T4 in the presence of low or normal TSH indicates hypothalamic or pituitary dysfunction. A high TSH in the presence of normal or high T4 suggests inappropriately high TSH secretion.

INCREASED LEVELS are seen in primary hypothyroidism, inappropriate TSH secretion, systemic illness, rarely in TSH secreting pituitary tumours (secondary hyperthyroidism).

DECREASED LEVELS are seen in secondary hypothyroidism, Hyperthyroidism.

(NOTE - INFORMATION GIVEN ABOVE IS ABOUT THE COMMON CONDITION IN RELATION TO THE TEST)

TUMOR MARKER

1539-PSA PROSTATIC SPECIFIC ANTIGEN 0.83 ng/ml

SP-SERUM

Sandwich Direct CLIA

EXPECTED VALUES :

99% :	of Healthy males	0.0-4.0 ng/ml
80% :	of Benign prostatic hypertrophy	0.0-4.0 ng/ml
81% :	of Prostatic Carcinoma	Above 4.0 ng/ml

PSA is reliable tumor marker for already diagnosed prostatic carcinomas. It is uniquely associated only with prostatic tissue, and therefore is specific for it. Baseline levels measured prior to therapeutic intervention and followed later by serial periodical measurements with predict the outcome of therapy. It is also helps in early discovery of recurrences, relapses and metastases.

RECOMMENDED TESTING INTERVALS :

First Determination	:	Preoperatively (Baseline)
Second Determination	:	2-4 days Postoperatively
Third Determination	:	Before discharge from hospital
Follow-up Determinations	:	
If levels are high/show rising trend	:	Monthly

It levels are normal :

Every 3 monthly initially, later annually.

In general, tumor marker levels are directly proportional to the tumor mass and the stage of the cancer. However, it is the rate of change of the tumor marker level which is more important, rather than its absolute value. A 50% change may be considered clinically significant. It must be emphasised that PSA may also be elevated in benign prostatic hypertrophy and inflammatory conditions of the surrounding genito urinary tract. Therefore, this parameter should never be used as a screening test for
