HAEMATOLOGY

Test Advised BLOOD GROUP

Result

Sample Tested : EDTA Sample
Blood Group : "O" Rh POSITIVE
(Method: Slide haemagglutination; Tube haemagglutination, (Forward typing))
KIT USED : Tulip Diagnostic (P) LTD.

Note :

This is for your information only. No transfusion / therapeutic intervention is done without confirmation of blood group by concerned authorities of Blood Bank / Blood storage.

Test Advised ESR

Result

Unit

Reference Range

Sample Tested : EDTA Sample
ESR (Erythrocyte sedimentation Rate) : 5 mm at end of 1hr 0 - 20
(Method: Westergren Method)

TEST DONE ON : Aspen ESR20Plus

Interpretation :

1) A normal ESR does not exclude active disease.
2) The ESR increases with age, and is raised in pregnancy and in anaemia; mild to moderate elevations should be interpreted with caution in these situations. It is increased in acute and chronic inflammatory disease and in neoplastic disease. The ESR may be very high (>100 mm in 1 hour) in multiple myeloma, tuberculosis and temporal arteritis. A low ESR (1 mm in 1 hour) may be seen in polycythaemia rubra vera and sickle cell disease.

Note :

The erythrocyte sedimentation rate is the rate at which red blood cells sediment in a period of one hour.

It is a common hematology test, and is a non-specific measure of inflammation.

<i>(Method :Sandwich immunodetection)</i>			
Mean Blood Glucose	: 90.49	mg%	
Interpretation	: Within Normal Limit.		
KIT USED :	: FINECARE		

TEST DONE ON : FINECARE .

Note :

Glycosylated Haemoglobin is an accurate and true index of the " Mean Blood Glucose Level " in the body for the previous 2-3 months.
HbA1c is an indicator of glycemic control. HbA1c represent average glycemia over the past six to eight weeks.
Recent glycemia has the largest influence on the HbA1c value.
Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months 2-4.
Glycosylated Hb is useful in monitoring diabetic patients compliance with therapeutic regimen & long term blood glucose level control. Glycosylated Hb predicts risk of progression of diabetic complications.
When mean annual Glycosylated Hb is 1.1 x ULN (upper limit of normal), renal & retinal complications are rare, but complications occur in >70% of cases when Glycosylated Hb is >1.7.
