## HAEMATOLOGY

<u>TEST(S)</u>	<u>RESULT(S)</u>	<u>UNITS</u>	<u>REFERENCE RANGE</u>
----------------	------------------	--------------	------------------------

<b>Blood Group</b>	: "O" Rh Positive		
--------------------	-------------------	--	--

<b>ESR ( Westergren"s Method)</b>	: 10	mm after 1st hour	0-15
-----------------------------------	------	----------------------	------

### GLYCOSYLATED HEMOGLOBIN (HbA 1c)

Result	: 5.1 %		
--------	---------	--	--

Reference Range	: 4.5 - 7.0 %: indicates Normal Result		7.0 % - 10.0 %:Indicates fair diabetic control
			10-20%:Indicates poor diabetic control

Note: Glucose combines with hemoglobin continuously and nearly irreversibly during the life-span of the red blood corpuscle (120 days); thus glycated hemoglobin is proportional to mean plasma glucose level during the previous 6 - 12 weeks.  
Reported on Fully Automated GHb instrument Micromat II, BIORAD, USA.

Sample is reprocessed & report is confirmed.

## ENDOCRINOLOGY

<u>TEST(S)</u>	<u>RESULT(S)</u>	<u>UNITS</u>	<u>REFERENCE RANGE</u>
<b>THYROID FUNCTION TEST</b>			
Triiodothyronine (T3)	: 1.0	ng/ml	0.79-1.58
Thyroxine (T4)	: 5.6	µgm/dl	4.0-11.0
Thyroid stimulating hormone (TSH)	: 2.1	µIU/ml	0.40-5.5

Reported on Fully Automated AIA - 600 TOSOH, Japan.

Note Three common ways in which there may be inadequate amounts of the thyroid hormone for normal metabolism. 1. Primary hypothyroidism, in which there is a raised TSH and a low T4 and low T3. This is due to failure of the thyroid gland, possibly due to autoantibody disease, possibly due to toxic stress or possibly due to iodine deficiency. 2. The second, the most common cause of thyroid failure, occurs at the pituitary level. In this condition there is inadequate thyroid stimulating hormone (TSH) produced from the pituitary and so one tends to see low or normal TSH, low T4s and variable T3s. This condition is most common in many patients with chronic fatigue syndrome, where there is a general suppression of the hypothalamic-pituitary-adrenal axis. 3. The third type of under-functioning is due to poor conversion of T4 to T3. This requires enzymes and co-factors, in particular selenium, zinc and iron. In this condition there are normal or possibly slightly raised levels of TSH, normal levels of T4 but low levels of T3. This requires micronutrients and also T3 to correct. Therefore, in any patient suspecting of thyroid problem routinely TSH, a Free T4 and a Free T3 are also advisable. Any patients who are taking T3 as part of their thyroid supplement need to have their T3 levels monitored as well as T4. T3 is much more quickly metabolized than T4 and blood tests should be done between 4-6 hours after their morning dose.

The Guideline for pregnancy reference ranges for Total T3, T4, TSH Level in pregnancy

	T3	T4	TSH
First Trimester	0.86-1.87	6.60-12.4	0.30-4.50
2nd Trimester	1.0-2.60	6.60-15.5	0.50-4.60
3rd Trimester	1.0-2.60	6.60-15.5	0.80-5.20

The guideline for age related reference ranges for T3, T4, & TSH

	T3	T4	TSH
Cord Blood	0.30-0.70	1-3 day 8.2-19.9	Birth-4 day: 1.0-38.9
New Born	0.75-2.60	1 Week 6.0-15.9	2-20 Week 1.7-9.1
1-5 Years	1.0-2.60	1-12 Months 6.8-14.9	20 Week-20 years 0.7-6.4
5-10 Years	0.90-2.40	1-3 Years 6.8-13.5	
10-15 Years	0.80-2.10	3-10 Years 5.5-12.8

## Ultrasound Abdomen and Pelvis

**Liver :** Normal in position shape and **shows diffuse bright Echotexture s/o Grade I fatty liver. Span: 12.0 cms**  
No IHBR dilatation seen. No focal lesion seen

**Spleen:** Normal position & echopattern.

**Pancreas:** Head, body and tail well visualized, normal echo texture and size. No dilatation of main pancreatic duct or focal lesion seen.

**Gall bladder:** Contracted, no obvious calculus noted.

**Common duct and Portal vein:** Normal.

**Kidneys:Size:Right kidney:** 10.0 x 4.4 cms  
Normal position, shape, echo pattern and corticomedullary differentiation seen. No calculi, hydronephrosis or focal parenchymal lesion seen. Moves freely with respiration.

**Left kidney:** 10.7 x 4.3 cms  
Normal position, shape, echo pattern and corticomedullary differentiation seen. No hydronephrosis or focal parenchymal lesion seen. **Evidence of 4 mm calculus noted in lower pole calyx**

**Retroperitoneum:** Not visualised due to bowel gas.

**Urinary bladder:** Well distended and normal in shape. Wall thickness is within normal limits. No calculus, mural lesion or diverticulum seen.

Prevoid volume: 200 cc

Post void residue: 10 cc (Insignificant postvoid residue)

**Prostate:** Normal in echopattern and shape. No focal lesion seen.

**IMPRESSION: 1. Grade I Fatty Liver**  
**2. Left Non Obstructive Renal Calculus**

Suggest: Clinical pathological correlation.
