**CLINICAL BIOCHEMISTRY**

Test Description	Result	Units	Biological Reference Ranges
Prostate Specific Antigen -Total <small>(Method: Chemiluminescence)</small>	0.37	ng/mL	< 4.0

PSA-raising factors: Besides cancer, other conditions that can raise PSA levels include an enlarged prostate (benign prostatic hyperplasia, or BPH) and an inflamed or infected prostate (prostatitis). Also, PSA levels normally increase with age.

PSA-lowering factors. Certain drugs used to treat BPH or urinary conditions, and large doses of certain chemotherapy medications, may lower PSA levels. Obesity can also lower PSA levels.
