This report is for perusal of the doctor only not the definitive diagnosis; findings have to be clinically correlated. Ultrasound has its limitations in obese patients and in retroperitoneal organs. All congenital abnormalities cannot be detected on ultrasound. Sex of the fetus is not determined here. This report is not for medico-legal purposes.

\* Only large obvious hypo/anechoic mass lesion can be diagnosed by USG. Mammography/breast MRI are much more sensitive and specific imaging modalities for evaluation of breast parenchyma & breast lesion. Advised further evaluation with these imaging modalities if clinically indicated/strong suspicion of breast lesion.
