THYROID PROFILE

Remarks:

- Total serum T3 and T4 concentration is dependent upon a multiplicity of factors: thyroid gland function and its regulation, thyroxin binding globulin (TBG) concentration, and the binding of T3 & T4 to TBG. Thus, total T3 & T4 concentration alone is not sufficient to assess the clinical status.
- A decrease in total tri - iodothyronine values is found with protein - wasting diseases, certain liver diseases & administration of testosterone, diphenylhydantoin or salicylates
- Serum TSH values may be elevated by pharmacological intervention, Domperidone, amiodazon, iodide, Phenobarbital, phenytoin have been reported to increase TSH levels
