### HAEMATOTOLOGY

results unit reference

#### ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate) 09 mm/1hr 00 - 22

##### Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

GOOD DIABETIC CINTROL	6-8 %
FAIR CONTROL	8-10 %
POOR CONTROL	>-10 %

The Glycosylated haemoglobin assay has been validated as a reliable indicator of mean blood glucose levels for a 3 months period. AMERICAN DIABETES ASSOCIATION recommends the testing twice an year in patients with stable blood glucose, and quarterly if treatment changes or blood glucose is abnormal

**Comments:**

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.
