**CHEST X-RAY PA :**

Both lung fields are clear.

The costophrenic angles and domes of diaphragm appear normal.

No hilar or mediastinal lesion seen.

Cardiac silhouette is within normal limits.

Visualised bony thorax and soft tissues appear normal.

**Impression:**

Normal Chest X-Ray.

DR. VISHAL GAJBHIYE

**USG ABDOMEN WITH PELVIS :**

Real time sonography of the abdomen and pelvis was performed using the 3.5 MHz transducer.

The liver is mildly enlarged in size (15.6 cm) and shows bright echotexture suggesting fatty infiltration. No focal parenchymal lesion noted.

Intrahepatic biliary tree and venous radicles are normal.

The portal vein and CBD appear normal in course and calibre.

The gall bladder is normal in size with a normal wall thickness and there are no calculi noted within.

The pancreas is normal in size and echotexture. No evidence of focal lesion or calcification or duct dilatation seen.

The spleen is normal in size and echotexture.

Both kidneys are normal in size, position and echogenecity.

Cortical thickness and corticomedullary differentiation are normal.

No hydronephrosis or calculi noted.

The bladder is normal in contour, capacity and wall thickness. No vesical calculi noted.

The prostate is normal in size and homogenous in echotexture.

There is no evidence of ascites.

**Impression :**

Mild hepatomegaly with grade I fatty infiltration of liver.

**Blood Group Report**

Name of the Patient : TUSHAR JAGTAP	Age : 35 Year	Gender : Male
Patient Sample ID : JJ23-R13731	Hospital IP NO: 346935	
Referred By Hospital : Wockhardt Super Speciality Hosp	Sample Received : EDTA / PLAIN	
Date & Time of Sample Receiving : 28/Oct/2023 10:07 AM	Adequacy of Sample : Adequacy	
Investigation Required : Blood Group	Date of Release of Report : 28/Oct/2023 11:31 AM	

**Report**

Forward Red Cell Blood Group : B

Reverse Serum Blood Group : B

Rh Typing : Rh Positive

Final Blood Group: B Rh.Positive

Opinion : If there is any Blood group discrepancy, it may be because of the irregular antibody present in the blood. This requires proper evaluation of Antibody Identification and Rh Phenotyping.

Remark :

**Principle of the Test :**

As the Matrix gel card containing red blood cells is centrifuged under specific conditions, the red blood cells sensitized with antibody will agglutinate in the presence of the Anti- Human Globulin reagent in the gel matrix and will be trapped in the gel column. The red blood cells, which do not react are not trapped in the gel matrix and are pelleted at the bottom of the column.

The reactions are then read and graded according to their reactivity pattern.
