Pathology

| Service Name | Result | Unit | Reference Range | Method |
|--|--------|-------|-----------------|--------|
| PSA (Prostate Specific Antigen) Total, Serum | 0.526 | ng/mL | 0.27-3.42 | CLIA |

Note

- This is recommended test for detection of prostate cancer along with digital rectal examination(DRE) in males above 50 years of age.
- False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy
- PSA Total and Free levels may appear consistently elevated / depressed due to interference by heterophilic antibodies & nonspecific protein binding,
- Immediate testing following digital rectal examination, ejaculation, prostatic massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as they falsely elevate levels
- Total and Free PSA values regardless of levels should not be interpreted as absolute evidence for the presence or absence of disease. All values should be correlated with clinical findings and results of other investigations

Clinical Use

- An aid in the early detection of Prostate cancer in males 50 years or older with Total PSA values between 4.0 and 10.0 ng/mL and nonsuspicious digital rectal examination.
- An aid in discriminating between Prostate cancer and Benign Prostatic disease. Patients with benign conditions have a higher proportion of Free PSA compared with Prostate cancer

URINE ANALYSIS/ URINE ROUTINE EXAMINATION, Urine

Physical Examination

| | | | |
|------------------|-------------|------------|---------------|
| COLOUR | Pale Yellow | | Manual method |
| TRANSPARENCY | Clear | | Manual |
| SPECIFIC GRAVITY | 1.020 | 1.001-1.03 | Strip |
| PH URINE | 6.5 | 5-8 | Strip |
| DEPOSIT | Absent | | Manual |

BIOCHEMICAL EXAMINATION

| | | | |
|-------------------|--------|--|--------|
| ALBUMIN | Absent | | Strip |
| SUGAR | Absent | | Strip |
| BILE SALTS (BS) | Absent | | Manual |
| BILE PIGMENT (BP) | Absent | | Manual |

MICROSCOPIC EXAMINATION

| | | | |
|------------------|--------|-------|------------|
| PUS CELLS | 1-2 | / hpf | Microscopy |
| EPITHELIAL CELLS | 0-1 | / hpf | Microscopy |
| RBC'S | Absent | /hpf | Microscopy |
| CASTS | Absent | | Microscopy |
| CRYSTALS | Absent | | Macroscopy |
| BACTERIA | Absent | | Macroscopy |
| FUNGUS | Absent | | Microscopy |
| SPERMATOZOA | Absent | | Microscopy |
| OTHERS | Absent | | Microscopy |

Thyroid Profile -T3, T4, TSH, Blood

| | | | | |
|-----------------------------------|---------------|--------|-----------|------|
| Triiodothyronine (T3) | 2.09 | ng/mL | 0.69-2.15 | CLIA |
| Thyroxine (T4) | 85.0 | ng/mL | 52-127 | CLIA |
| Thyroid Stimulating Hormone (TSH) | 5.81 H | uIU/mL | 0.3-5.0 | CLIA |

All tests have technical limitations Corroborative clinicopathological interpretation is indicated. In case of any disparity in including machine error or typing the test should be repeated immediately.

NOT VALID FOR MEDICO LEGAL PURPOSE.

| Service Name | Result | Unit | Reference Range | Method |
|--------------|--------|------|-----------------|--------|
|--------------|--------|------|-----------------|--------|

Interpretation

:Note:
 1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4.a.m. and at a minimum between 6-10 pm . The variation is of the order of 50% . hence time of the day has influence on the measured serum TSH concentrations.
 2. Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.
 3. Physiological rise in Total T3 / T4 levels is seen in pregnancy and in patients on steroid therapy.

Clinical Use
 Primary Hypothyroidism
 Hyperthyroidism Hypothalamic – Pituitary hypothyroidism
 Inappropriate TSH secretion
 Nonthyroidal illness
 Autoimmune thyroid disease
 Pregnancy associated thyroid disorders
 Thyroid dysfunction in infancy and early childhood

Haematology

| Service Name | Result | Unit | Reference Range | Method |

|-----------------------------|--------|--------|---|--------------|
| BUN-CREATININE RATIO | 11.41 | | 10-20 | Calculated |
| Sodium, Serum | 149.2 | mmol/L | 135-150 | ISE |
| Potassium, Serum | 4.56 | mmol/L | 3.5-5.5 | ISE |
| Calcium, Serum | 10.24 | mg/dL | 8.7-11.0 | ISE |
| Chloride, Serum | 98.0 | mmol/L | 94-110 | ISE |
| Uric acid, Serum | 4.48 | mg/dL | 3.4-7.0 | Uricase |
| Magnesium, Serum | 1.82 | mg/dL | 1.6-2.8 | XYLIDYL BLUE |
| Phosphorus, Serum | 3.79 | mg/dL | 2.4-5.0 | MOLYBDATE UV |
| Alkaline phosphatase, Serum | 88.73 | U/L | 53-165 | IFCC |
| Albumin, Serum | 3.86 | g/dL | 3.5-5.4 | BCG |
| Glucose (Fasting), Plasma | 103.37 | mg/dL | 60-110 | GOD/POD |
| Lipid Profile, Serum | | | | |
| Cholesterol, serum | 181.33 | mg% | Optimal: < 200 mg/dl Border Line High Risk: 150 -240 mg/dl High Risk: > 250 mg/dl | |
| Triglycerides, serum | 141.44 | mg% | Optimal: < 150 mg/dl Border Line High Risk: 150 - 199 mg/dl High Risk: 200 - 499 mg/dl Very High Risk: > 500 mg/dl | |
| HDL Cholesterol | 48.68 | mg% | Optimal: 70 mg/dl Border Line High Risk: 80 - 100 mg/dl High Risk: > 120 mg/dl | |
| LDL Cholesterol | 104.36 | mg% | Optimal: < 100 mg/dl Border Line High Risk: 100 - 129 mg/dl High Risk: > 160 mg/dl | |
| VLDL Cholesterol | 28.29 | mg% | Male : 10 - 40 mg/dl Female : 10 - 40 mg/dl Child : 10 - 40 mg/dl | |
| LDL / HDL Cholesterol ratio | 2.14 | | 0.0-3.5 | |

Interpretation :

- Measurements in the same patient can show physiological & analytical variations. Three serial samples 1 week apart are recommended for Total Cholesterol, Triglycerides, HDL & LDL Cholesterol.
- ATP III recommends a complete lipoprotein profile as the initial test for evaluating cholesterol.
- Friedewald equation to calculate LDL cholesterol is most accurate when Triglyceride level is < 400 mg/dL. Measurement of Direct LDL cholesterol is recommended when Triglyceride level is > 400 mg/dL.

LFT (Liver Function Test) Profile, Serum

| | | | | |
|----------------------------|------|-------|---------|------|
| Bilirubin Total, Serum | 0.50 | mg/dL | 0.1-1.0 | DMSO |
| Conjugated (Direct), Serum | 0.20 | mg% | 0.0-0.3 | DMSO |

All tests have technical limitations Corroborative clinicopathological interpretation is indicated. In case of any disparity in including machine error or typing the test should be repeated immediately.

| Albumin, Serum | 3.86 | g/dL | 3.5-5.4 | BCG |
| Globulin | 3.29 | g/dL | 2.3-3.6 | Calculated |
| A/G Ratio | 1.17 | | 1.0-2.3 | Calculated |
| VITAMIN B12 CYANOCOBALAMIN, Serum | 126.0 L | pg/mL | 200-1100 | CLIA |

Note :To differentiate vitamin B12 & folate deficiency, measurement of Methyl malonic acid in urine & serum, Homocysteine level is suggested

Comments:

Vitamin B12 performs many important functions in the body, but the most significant function is to act as coenzyme for reducing ribonucleotides to deoxyribonucleotides, a step in the formation of genes. Inadequate dietary intake is not the commonest cause for cobalamine deficiency. The most common cause is malabsorption either due to atrophy of gastric mucosa or diseases of terminal ileum. Cobalamine deficiency leads to Megaloblastic anemia and demyelination of large nerve fibres of spinal cord. Normal body stores are sufficient to last for 3-6 years. Sources of Vitamin B12 are liver, shellfish, fish, meat, eggs, milk, cheese & yogurt.

Decreased Levels

- * Lack of Intrinsic factor: Total or partial gastrectomy, Atrophic gastritis, Intrinsic factor antibodies
- * Malabsorption: Regional ileitis, resected bowel, Tropical Sprue, Celiac disease, pancreatic insufficiency, bacterial overgrowth & achlorhydria
- * Loss of ingested vitamin B12: fish tapeworm
- * Dietary deficiency: Vegetarians
- * Congenital disorders: Orotic aciduria & transcobalamine deficiency
- * Increased demand: Pregnancy specially last trimester

Increased Levels

Chronic renal failure, Congestive heart failure, Acute & Chronic Myeloid Leukemia, Polycythemia vera, Carcinomas with liver metastasis, Liver disease, Drug induced cholestasis & Protein malnutrition

All tests have technical limitations Corroborative clinicopathological interpretation is indicated. In case of any disparity in including machine error or typing the test should be repeated immediately.

NOT VALID FOR MEDICO LEGAL PURPOSE.

| Service Name | Result | Unit | Reference Range | Method |
|---|--------|-------|---|--------|
| HbA1c | | | | |
| GLYCOSYLATED HAEMOGLOBIN (HbA1c) | | | | |
| Method- Immunofluorescence Assay | | | | |
| Glycosylated Hemoglobin (HbA1c) | 6.40 | % | <6.5 : Non Diabetic 6.5-7 : Good Control 7-8 : Weak Control > 8 : Poor Control | |
| Estimated average blood glucose (eAG) | 136.98 | mg/dl | 90-120: Excellent Control 121-150: Good Control 151-180: Average Control 181-210: Action Suggested | |

Note:

1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

2.Target goals of 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targeting a goal of 7.0 % may not be appropriate.

Comments:

HbA1c provides an index of average blood glucose levels over the past 8 - 12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

| | | | | |
|---|----------------|-------|--------|---------|

| Service Name | Result | Unit | Reference Range | Method |
|--------------|--|------|-----------------|--------|
| Note | <p>:Note 1. Reference ranges represent clinical decision values and are established only for 25-Hydroxy Vitamin D, Total.</p> <p>2. Conventional Immunoassays may have sample-specific interferences that can lead to variable performance. These interferences include other vitamin D metabolites (e.g. 24,25-dihydroxyvitamin D3, 3-epi 25 hydroxy vitamin D3) and certain lipid.</p> <p>3. Physiologically inactive epimers of Vitamin D2 & D3 are separated chromatographically with Vitamin D metabolites as they may result in overestimation of Total Active Vitamin D levels. This can create therapeutic errors since patients who are deficient or insufficient may appear sufficient and toxicity may be reported in patients with high normal levels.</p> | | | |

COMMENT:

Vitamin D promotes absorption of calcium and phosphorus and mineralization of bones and teeth. Deficiency in children causes Rickets and in adults leads to Osteomalacia. It can also lead to Hypocalcemia and Tetany. Vitamin D status is best determined by measurement of 25 hydroxy vitamin D, as it is the major circulating form and has longer half life (2-3 weeks) than Dihydroxy vitamin D (5- 8 hrs).

- Decreased Levels** · Inadequate exposure to sunlight
- Dietary deficiency
 - Vitamin D malabsorption
 - Severe Hepatocellular disease
 - Drugs like Anticonvulsants
 - Nephrotic syndrome

Increased levels -Vitamin D intoxication

-----End of the Report-----
