## USG OF WHOLE ABDOMAN

### **Complaining of / Indication- Routine check-up**

Convex and linear probes were used.

**The liver** is normal in size contour and echotexture. Intrahepatic bile ducts and CBD are not dilated. Hepatic portal veins and the IVC appear normal in caliber.

**Gall bladder** is adequately distended with normal intraluminal fluid contents. No evidence of calculus / wall thickness noted.

**Pancreas** is of normal size and contour with normal echotexture.

**Right kidney** is normal in size and position .It shows normal movements with respiration. Cortical thickness is normal .

No calculus, mass or hydronephrotic changes seen.

**Right kidney measures- 10.8x4.3cm**

Renal artery pulsation appear normal.

Left kidney is normal in size and position .It shows normal movements with respiration. Cortical thickness is normal .

No calculus, mass or hydronephrotic changes seen.

**Left kidney measures- 10.4x5.4cm**

Renal artery pulsation appear normal.

**Spleen** is of normal size and shape. Echotexture is normal. No focal lesion is seen.

No evidence of retro-peritoneal lymphadenopathy/ ascites/ pleural effusion noted.

Urinary bladder does not show any calculus or mass lesion. No significant wall thickening noted.

**Prostate** is of normal size for age with regular contours and normal echo-texture.

**Impression : Normal sonogram.**

Part:X-ray Chest

**Indication:-** Routine checkup.

**Image quality:-**

No evidence of rotation.

PA view.

Normal penetration.

**Airway:-** Trachea central.

Carina & bronchi are normal.

No hilar abnormality.

**Cardiac:-** Cardiac borders are visible.

Normal heart size.

**Diaphragm:-** Costophrenic angles on right & left are normal.

Cardiophrenic angles on right & left are normal.

Diaphragm portion are normal.

**Bony cage:-** No evidence of bony lesion/fracture seen.

No evidence of cervical ribs seen.

**Impression: No significant abnormality detected.**

11-14 Years 0.53-5.27  
15-20 years 0.43-4.20

**COMMENTS:** Assay results should be interpreted in context to the clinical condition and associated results of other investigations. Previous treatment with corticosteroid therapy may result in lower TSH levels while thyroid hormone levels are normal. Results are invalidated if the client has undergone a radionuclide scan within 7-14 days before the test. Abnormal thyroid test findings often found in critically ill clients should be repeated after the critical nature of the condition is resolved. The production, circulation, and disintegration of thyroid hormones are altered throughout the stages of pregnancy

## BIOCHEMISTRY

Test Name	Value	Unit	Normal Value
-----------	-------	------	--------------

HbA1c

**HbA1c (ngsp)**

HighPressure Liquid Chromatograpy

5.88

Reference Range (HBA1c) :

4.5 - 6.4 %

Good control : 4.5 - 6.4 %

Fair control : 6.5 - 7.4 %

Poor control : Above - 7.5 %

COMMENTS: HbA1c is an indicator of glycemic control. HbA1c represents average glycemia over the past six to eight weeks. Glycation of hemoglobin occurs over the entire 120 day life span of the red blood cell, but with in this 120 days.Recent glycemia has the largest influence on the HbA1c value. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four. Estimated Average Glucose mg/dl = (HbA1c x 35.6) - 77.3) Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only this means that to predict or estimate average glucose from Hb-A1c or vice-versa is not "perfect" but gives a good working ballpark estimate. Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime glucose levels, which are easier to predict and control. As per IFCC recommendations 2007, HbA1c being reported as above maintaining traceability to both IFCC (mmol/mol) & NGSP (%) units.

## BIOCHEMISTRY

Test Name	Value	Unit	Normal Value
-----------	-------	------	--------------

BLOOD UREA NITROGEN (BUN)

13.08

mg/dl

6.0 - 20.0

SERUM URIC ACID

6.00

mg/dL

3.4 - 7.0

Comments:

Uric acid is the metabolic end- product of purine metabolism. Increased levels of uric acid in serum

(hyperuricemia) are either due to increased synthesis or decreased excretion in urine. This test is used for diagnosis and treatment of renal and metabolic disorders like renal failure, gout, leukemia, Psoriasis, starvation or patients on cytotoxic drugs. Uric acid levels are very labile and show seasonal / day to day variation. Its levels in serum are also increased in emotional stress, starvation and in obese, Hyperuricemia is associated with increased risk for coronary artery disease.

Elevated levels of uric acid seen in - renal failure, gout ( up to 25 % of relatives of patients with gout. ) , asymptomatic hyperuricemia, myelolymphoproliferative disorders, disseminated neoplasms, cancer chemotherapy, hemolytic anemia, sickle cell anemia, resolving pneumonia, toxemia pf pregnancy, psoriasis ( one third cases) , metabolic acidosis, von gierks's lead poisoning, Lesch- Nyhan syndrome, maple syrup urine disease, down syndrome, polycystic kidney disease, hypoparathyroidism, primary hyperparathyroidism, hypothyroidism, sarcoidosis and drugs ( e.g. diuretics , mitomycin C, Levodopa , phenytoin, barbiturates, ammonia, small doses of salicylates ).

SERUM CREATININE 0.64 mg/dl 0.6 - 1.50

Sub-Regarding Health check up

Sir,

This is to inform you that my Health checkup is done at diagnostic and imaging centre Dwarka on 13/11/2021. As my residence is bit far from this location, I won't be able to come after 1.30 hours for Blood sample after food.

This is for your information
