Ketones	Negative		Negative
Method : Dipstick/Manual			
Nitrite	Negative		Negative
Method : Dipstick/Manual			
Urobilinogen	Normal		Normal
Method : Dipstick/Manual			

**Microscopic Examination - Method "Microscopy"**

Pus cells	1 - 2	/hpf	0 - 4/hpf
Red Blood Cells	NIL	/hpf	Nil
Epiethelial Cells	1 - 2	/hpf	1 - 2/hpf
Crystals	Absent	.	Absent
Casts	Absent	.	Absent
Yeast	Absent	.	Absent
Bacteria	Absent	.	Absent

**Note**

Pus Cells are significant only in midstream sample. Important for interpretation in female patient as local contamination may occur.

A urine analysis alone usually doesn't provide a definite diagnosis. Depending on the reason your doctor recommended this test, you might need follow-up for unusual results. Evaluation of the urine analysis results with other tests can help your provider determine next steps. Getting standard test results from a urine analysis doesn't guarantee that you're not ill. It might be too early to detect disease or your urine could be too diluted. Tell your doctor if you still have signs and symptoms.

**Sample Type** : SERUM

Test Description	Value	Unit	Biological Ref Interval
<b>Thyroid Function Test (T3,T4,TSH)</b>			
Mediwheel metro full body health check up below 40 Male			
TOTAL T3	1.24	ng/mL	0.60 - 1.83
Method : CLIA			
TOTAL T4	9.65	ug/dl	5.48 - 14.28
Method : CLIA			
Thyroid Stimulating Hormone - TSH	1.69	uU/ml	0.35 - 5.50
Method : CLIA			

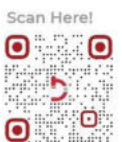

**COMMENTS:-**

A high TSH result often means an underactive thyroid gland caused by failure of the gland (Hypothroidism). Very rarely, a high TSH result can indicate a problem with the pituitary gland, such as a tumour, in what is known as secondary hyperthyroidism. A high TSH value can also occur in people with underactive thyroid gland who have been receiving too little thyroid hormone medication.

A low TSH result can indicate an overactive thyroid gland (hyperthyroidism) or damage to the pituitary gland that prevents it from producing TSH. A low TSH result can also occur in people with an underactive thyroid gland who are receiving too much thyroid hormone medication.

<b>Sample Type</b> : EDTA	

**GLYCOSYLATED HAEMOGLOBIN HbA1c\***

Mediwheel metro full body health check up below 40 Male

HBA1C\* 5.6 % 4.00 - 5.70

Method : HPLC - Ion Exchange

MEAN BLOOD GLUCOSE LEVEL Mean Blood 114 mg/dL 68 - 117

Glucose Level over past 60 days period

**INTERPRETATION****According to recommendations of the American Diabetes Association (ADA)**

Group	HbA1c in %
Non-Diabetic adults 18 year	4.5 - 5.6
At risk of developing diabetes	> 5.7 to < 6.4
Diagnosing of Diabetes mellitus	>= 6.5

**Comments**

- Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have q high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
- Diabetes patients with HbA1c levels below 7%(DCCT/NGSP) meet the goal of the ADA.
- HbA1c levels below the established reference interval may indicate recent episodes of hypoglycemia, the presence of Hb variants or shortened lifetime of erythrocytes.
- HbA1c Provides an index of average blood glucose levels over the past 8 -12 weeks and is a much better indicator of long term glycemic control as compared to blood and urinary glucose determinations.

**FACTORS THAT INTERFERE WITH HbA1C Measurement-** Hemoglobin variants,elevated fetal hemoglobin (HbF) and chemically modified derivatives of hemoglobin (e.g. carbamylated Hb in patients with renal failure) can affect the with renal failure) can affect the accuracy of HbA1c measurements.

**FACTORS THAT AFFECT INTERPRETATION OF HBA1C RESULTS** - Any condition that shortens erythrocyte survival or decreases mean erythrocyte age (e.g.,recovery from acute blood loss, hemolytic anemia, HbSS, HbCC, and HbSC) will falsely lower HbA1c test results regardless of the assay method used. Iron deficiency anemia is associated with higher HbA1c

### Male Ultrasound Whole Abdomen\*

Mediwheel metro full body health check up below 40 Male

**Liver** measures 15.8cm in the craniocaudal axis , outline smooth with homogenous **echotexture**. No obvious focal parenchymal lesion seen no extra or intra hepatic biliary dilatation is noted . Hepatic veins drain normally in to IVC . Portal vein is normal and in course and caliber.

**Gall bladder is distended**. No intra luminal calculus is seen. Gall bladder wall is normal in thickness Common bile duct is normal in caliber and lumen is clear.

**Pancreas** is normal in size & outline **Echotexture is homogenous but reflective suggestive of fatty change**. No evidence of any focal lesion or calcification is seen. Pancreatic duct is not dilated.

**Spleen measures 9.2 cm** normal in outline and echotexture. No focal lesion calcification is seen.

Right **kidney** measures 98.4 x 33.3 mm , corticomedullary differentiation is maintained. cortical echotexture is homogenous No mass lesion, calculus or hydronephrosis is seen .

Left **kidney** measures 97 x 34 mm , corticomedullary differentiation is maintained. cortical echotexture is homogenous No mass lesion, calculus or hydronephrosis is seen .

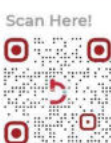

**Urinary bladder** is distended. wall thickness is normal ,no calculus or mass seen.

**Prostate measures 26.4 x38.7 x 37.6 mm Volume is 15 ml. Echotexture is homogenous no focal lesion is seen.**

No significant gastric or small bowel lesion is seen.

No significant retroperitoneal lymph adenopathy . No peritoneal fluid seen.

**Impression: Normal Study**

Test Description	Value	Unit	Biological Ref Interval
	<b><u>TOTAL PSA*</u></b>		
Mediwheel metro full body health check up below 40 Male			
TOTAL PSA	0.55	ng/ml	< 4

Method : ENHANCED CHEMILUMINESCENCE

**SUMMARY**

PSA is localized in the cytoplasm of prostatic ductal epithelium and in secretions of the ductal lumina. Because PSA is a secretory protein of the prostate, it can be recovered and purified both from prostatic tissue and from seminal plasma. PSA has been found to be primarily associated with prostate tissue, and elevated serum PSA has been found in patients with prostate cancer, benign prostatic hypertrophy, and inflammatory conditions.

Serum PSA alone is not suitable as a screen for prostate cancer because elevated PSA concentrations are also observed in patients with benign prostatic hypertrophy (BPH), nor is it recommended as a guide in disease staging. The combination of PSA measurement and rectal examination with ultrasonography in the event of abnormal findings may provide a better method of detecting prostate cancer than rectal examination alone. PSA determinations can be useful in detecting metastatic or persistent disease in patients following surgical or medical treatment of prostate cancer.

*Final Interpretation*

Study done at heart rate 78 BPM  
 No regional wall motion abnormality. Global LVEF= 60%.  
 Normal cardiac chambers dimensions.  
 No MR.  
 Mild TR (RVSP=22+ RAP).  
 RV systolic function is normal.  
 No intra cardiac clot/mass/veg./pericardial effusion.  
 IVC normal with >50% respiratory variation
