SPECIAL TEST REPORT

Test Name	Observed Value	Unit	Bio. Reference Range
Serum PSA (Prostate Specific Antigen)# Immunofluorescence(Mini Vidas)	0.38	ng/ml	0 - 4

PSA is used in the early detection and managment of Prostate Cancer.It may be elevated in Bening Prostatic Hypertrophy and Prostatitis.In such cases free PSA level are recommended.

Thyroid Profile (FT3, FT4,TSH/T3,T4,TSH)

Immonology Profile

Serum FT3	4.5	pmol/l	3.2 - 5.9
<i>Method : Immunofluorescence (Tosoh)</i>			

Triiodothyronine T3 is a homone produced by the thyroid and by conversion of T4 to T3. Free T3 is used in the diagnosis and monitoring of hyperthyroidism. Free T3 assays can differentiate most cases of nonthyroidal illness from TSH dependent hyperthyroidism .

Serum FT4	15.8	pmol/l	10.6 - 21.0
<i>Method: Immunofluorescence (Tosoh)</i>			

FT4 is the active fraction of tetraiodothyronine. FT4 increases in patients with hyperthyroidism, whereas it is decreased in patients of hypothyroidism. Patients on hormone replacement therapy may have an elevated FT4 levels. Values of FT4 may be used in conjunction of TSH levels.

Serum TSH	3.9	uIU / ml	0.25 - 5.0
<i>Method: Immunofluorescence (Tosoh)</i>			

TSH is an early and sensitive indicator of decreased thyroid reserve. This assay helps to diagnose hypothyroidism and hyperthyroidism, monitors T4 replacement or T4 suppressive therapy and quantifies TSH levels in the subnormal range.

ULTRASOUND WHOLE ABDOMEN

Name of Patient: Mr. Ankush

Date: 09-12-2023

The diaphragm is normal in contour and respiratory excursion.

There is no pleural, subphrenic, abdominal or pelvic fluid collection.

There is no enlarged celiac, mesenteric or para aortic lymph nodes.

The liver is normal in size with **diffuse grade II-III fatty infiltration**. No echogenic or poor lesion is present in lobes of liver. Intrahepatic biliary radicles are not dilated. I.V.C., hepatic vein and portal vein (13.6mm) are normal.

The gall bladder is distended, multiple echoreflexive calculi are present in the lumen. It wall is not thickened. The common bile duct is normal (4.7mm).

The pancreas and spleen are normal.

Both kidneys are normal in size, shape, position and echotexture. Renal outline is smooth and normal parenchymal thickness seen in both kidneys. C.M. differentiation is maintained. Pelvicalyceal system is not dilated. No calculus or perinephric collection is seen.

The urinary bladder and prostate are normal.

Impression: - **Cholelithiasis**

Regards. Apollo Clinic
