HbA1C

Test name	results	units
HbA1c{GLYCOSYLATED HEMOGLOBIN}BLOOD	7.3	%

Interpretation

As per American Diabetes association {ADA}	
Reference Group	HbA1c in %
Non diabetic adults ≥ 18 years	4.0 - 6.0
At risk	≥ 6.0 to ≤ 6.5
Diagnosing diabetes	> 6.5
Therapeutic goals for glycemic Control	Adults Goal of therapy : < 7.0 Action suggested : > 8.0

Note : 1. Since HbA1c reflects long term fluctuations in the blood glucose concentration, a diabetic patient who is recently under good control may still have a high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

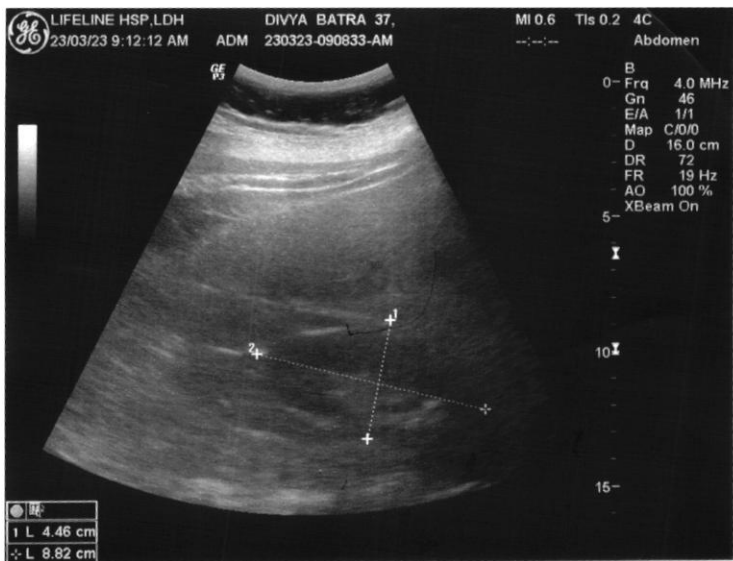

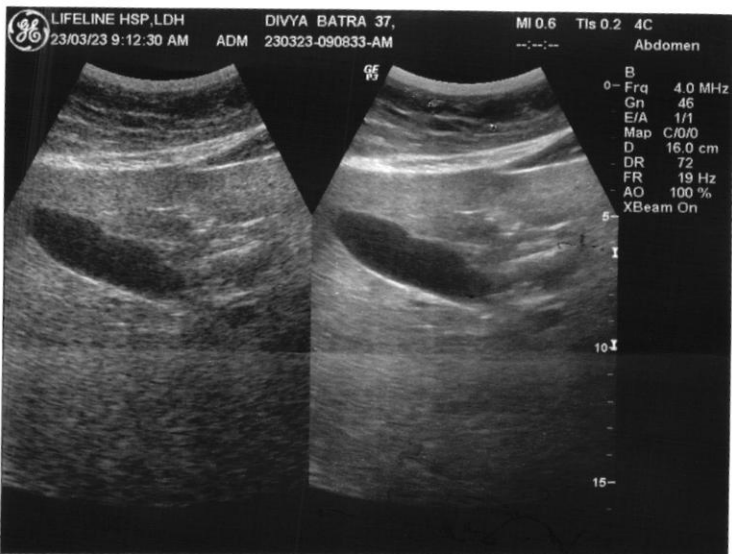

2. target goals of < 7.0 % may be beneficial in patients with short duration of diabetes , long life expectancy and no significant cardiovascular disease .In patient with significant complications of diabetes , limited life expectancy or extensive co-morbid conditions, targeting a goal of < 7.0 % may not be appropriate.

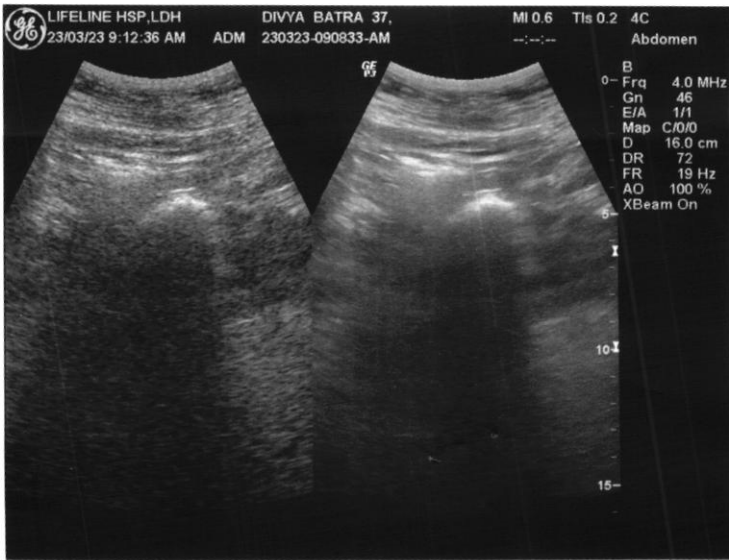

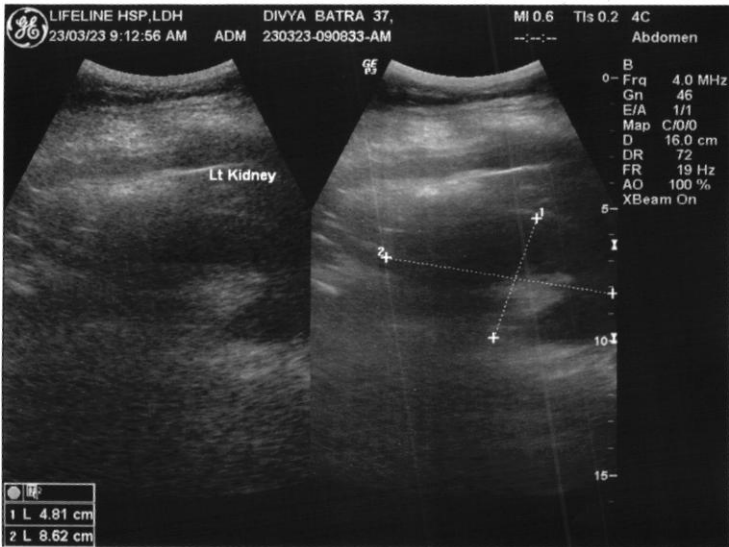

Comments

HbA1c provides an index of average blood glucose level over the past 8-12 weeks & is a much better indicator of long term glycemic as compared to blood & urinary glucose determinations.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels
