CLINICAL BIOCHEMISTRY

| Test                      | Result | Unit | Biological Reference Interval   |
|---------------------------|--------|------|---|
| HbA1c                     |        |      |   |
| HbA1c                     | 6.2    | %    | Up to-Normal: < 6<br>Good Control: 6.01-7.00<br>Fair Control: 7.01-8.00<br>Poor Control: > 8.01 |
| Estimated Average Glucose | 131.24 | -    | -   |

Interpretation:

- HbA1c above 6.5% can be used to diagnose diabetes provided the patient has symptoms. If the patient does not have symptoms with HbA1c > 6.5%, repeat measurement on further sample. If the repeat test result is < 6.5%, consider as diabetes high risk and repeat measurement after 6 months.
- HbA1c measurement is not appropriate in diagnosing diabetes in children, suspicion of type 1 diabetes, symptoms of diabetes for less than 2 months, pregnancy, hemoglobinopathies, medications that may result sudden increase in glucose, anemia, renal failure, HIV infection, malignancies, severe chronic hepatic, and renal disease.
- Any sample with > 15% should be suspected of having a haemoglobin variant.

**Interpretations:**

Thyroid hormone binding protein can profoundly affect total T3 and total T4 levels especially in pregnancy and in patients on steroid therapy.

Unbound fractions of T3 and T4 (FT3, FT4) of thyroid hormones are biologically active forms and correlate more closely with clinical status of the patient.

Patient Name : Anamika Sahu MRN : 10090000368025 Gender/Age : FEMALE , 32y (30/06/1991)

|   |       |        |          |

| Thyroxine (T4) (Chemiluminescence Immuno Assay (CLIA))                    | 8.11  | mcg/dl | 3.2-12.6 |
| TSH (Thyroid Stimulating Hormone) (Chemiluminescence Immuno Assay (CLIA)) | 3.599 | mIU/L  | 0.4-4.04 |

**Interpretations:**

TSH levels are subject to circadian variation, reaching peak levels between 2-4 a.m. and minimum between 6-10 p.m. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentration.

|--|--------|-------|---|
| <b>POST PRANDIAL BLOOD GLUCOSE (PPBG)</b><br>(Glucose Oxidase, Peroxidase) | 95     | mg/dl | Normal : 70-139<br>Prediabetic : 140-199<br>Diabetic : >200 |

**Interpretations:**

(ADA Standards Jan 2017)

FBS can be less than PPBS in certain conditions like post prandial reactive hypoglycaemia, exaggerated response to insulin, subclinical hypothyroidism, very lean/anxious individuals. In non-diabetic individuals, such patients can be followed up with GTT.
