## HAEMATOLOGY

### Test Advised BLOOD GROUP

### Result

**Sample Tested :** : EDTA Sample  
**Blood Group** : "A" Rh NEGATIVE  
*(Method: Slide haemagglutination; Tube haemagglutination, (Forward typing))*  
**KIT USED :** : Tulip Diagnostic (P) LTD.

Note :

This is for your information only. No transfusion / therapeutic intervention is done without confirmation of blood group by concerned authorities of Blood Bank / Blood storage.

### Test Advised ESR

### Result

### Unit

### Reference Range

**Sample Tested :** : EDTA Sample  
**ESR (Erythrocyte sedimentation Rate)** : 4 mm at end of 1hr 0 - 9  
*(Method: Westergren Method)*

**TEST DONE ON : Aspen ESR20Plus**

Interpretation :

1) A normal ESR does not exclude active disease.  
2) The ESR increases with age, and is raised in pregnancy and in anaemia; mild to moderate elevations should be interpreted with caution in these situations. It is increased in acute and chronic inflammatory disease and in neoplastic disease. The ESR may be very high (>100 mm in 1 hour) in multiple myeloma, tuberculosis and temporal arteritis. A low ESR (1 mm in 1 hour) may be seen in polycythaemia rubra vera and sickle cell disease.

Note :

The erythrocyte sedimentation rate is the rate at which red blood cells sediment in a period of one hour.

It is a common hematology test, and is a non-specific measure of inflammation.

## BIOCHEMISTRY

**Sample Tested** : EDTA Sample

**Glycosylated Hb (HbA1c)** : 5.9 %  
*(Method :Sandwich immunodetection)*  
Within Normal Limit 4.0 - 6.5  
Good Control 6.5 - 7.5  
Moderate Control 7.5 - 9.0  
Poor Control 9.0 and Above

**Mean Blood Glucose** : 110.47 mg%

**Interpretation** : Within Normal Limit.

**KIT USED** : FINECARE

### TEST DONE ON : FINECARE .

#### Note :

Glycosylated Haemoglobin is an accurate and true index of the " Mean Blood Glucose Level " in the body for the previous 2-3 months.  
HbA1c is an indicator of glycemic control. HbA1c represent average glycemia over the past six to eight weeks.  
Recent glycemia has the largest influence on the HbA1c value.  
Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months 2-4.  
Glycosylated Hb is useful in monitoring diabetic patients compliance with therapeutic regimen & long term blood glucose level control. Glycosylated Hb predicts risk of progression of diabetic complications.  
When mean annual Glycosylated Hb is  $1.1 \times$  ULN (upper limit of normal), renal & retinal complications are rare, but complications occur in >70% of cases when Glycosylated Hb is >1.7.

## ENDOCRONOLOGY

<u>Test Advised</u>	<u>Result</u>	<u>Unit</u>	<u>Reference Range</u>
<b><u>FREE THYROID FUNCTION TEST</u></b>			
Sample Tested :	: Fasting Sample		
Free T3(Free Triiodothyronine) (Method :ELFA)	: 4.56	pmol/L	4.0 - 8.3
Free T4 (Free Thyroxine) (Method :ELFA)	: 15.20	pmol/L	10.6 - 19.4
hTSH (Ultra sensitive) (Method :ELFA)	: 3.95	μUI/ml	0.25 - 6
Method :	: ELFA		

**TEST DONE ON : VIDAS,fully automated ELFA analyzer from Bio-Merieux-France**

Note :

- 1) Decreased T3 (normal T4 & TSH) have minimal clinical significance and are not recommended for diagnosis of hypothyroidism.
- 2) Total T3 may be decreased by 25% in healthy older individuals.
- 3) A High TSH level and low T3/T4 level indicate hypothyroidism.
- 4) Raised T3/T4 levels and low TSH levels indicate hyperthyroidism.
- 5) T4 levels are high at birth due to increased TBG concentration.
- 6) Quantitative T3 can give an indication of the severity and recovery from hyperthyroidism.
