SONOGRAPHY OF ABDOMEN AND PELVIS

LIVER: Liver appears normal in size and shows normal parenchymal echoes. No evidence of focal or diffuse lesion is seen. No evidence of dilated IHBR is seen. Intrahepatic portal radicles appear normal. No evidence of solid or cystic mass lesion is seen.

GALL BLADDER: Gall bladder is physiologically distended and appears normal. No evidence of calculus or changes of cholecystitis are seen. No evidence of pericholecystic fluid collection is seen. CBD appears normal.

PANCREAS: Pancreas appears normal in size and shows normal parenchymal echoes. No evidence of pancreatitis or pancreatic mass lesion is seen.

SPLEEN: Spleen appears normal in size and shows normal parenchymal echoes. No evidence of focal or diffuse lesion is seen.

KIDNEYS: Both kidneys are normal in size, shape and position. Both renal contours are smooth. Cortical and central echoes appear normal. Bilateral cortical thickness appears normal. No evidence of renal calculus, hydronephrosis or mass lesion is seen on either side. No evidence of perinephric fluid collection is seen.

Right kidney measures about 10.0 x 4.1 cms in size.
Left kidney measures about 10.4 x 4.2 cms in size.

No evidence of suprarenal mass lesion is seen on either side.

Aorta, IVC and para aortic region appears normal.
No evidence of ascites is seen.

BLADDER: Bladder is normally distended and appears normal. No evidence of bladder calculus, diverticulum or mass lesion is seen. Prevoid bladder volume measures about 160 cc.

UTERUS: Uterus is anteverted and appears normal in size, shape and position. Endometrial and myometrial echoes appear normal. Endometrial thickness measures about 5.7 mm. No evidence of uterine mass lesion is seen.

Bulky both ovaries are seen without focal lesion.

COMMENT: Normal sonographic appearance of liver, GB, pancreas, spleen, kidneys, para aortic region, bladder and uterus.

CONDITIONS OF REPORTING

1. All laboratory investigations have their limitations which are imposed by the limits of sensitivity and specificity of individual assay procedures as well as the quality of the specimen received by the laboratory. Isolated laboratory investigations never confirm the final diagnosis of the disease, but only help in arriving at a diagnosis in conjunction with clinical presentation and other related investigations.
2. The result(s) relate only to the sample(s) received.
3. The test report shall not be reproduced except in full, without written approval of the Neuberg Supratech Reference Laboratory (NSRL).
4. For any query in the report, it is suggested to contact the concerned laboratory personnel as suggested in the table to help carry out follow-up action (rechecking, repeat sampling, reflex/confirmatory testing, etc.). Neuberg Supratech Reference Laboratories (NSRL) follows a procedure of retaining & preserving samples after testing for a stipulated period. After the retention period of the sample, a fresh specimen is requested.
5. Report results are for the information of the referring doctor only.
6. For tests performed on specimens received from non - Neuberg Supratech Reference Laboratory (NSRL) locations (within and outside Ahmedabad) it is presumed that the specimen belongs to the patient named or identified, such verification having been carried out at the point of generation of the said specimen.
7. A test requested might yield 'INCOMPLETE RESULTS' for various technical reasons and this response will appear against the test name followed by detailed comment at the end of the report. It is expected that a fresh specimen will be sent for the purpose of reporting on the same parameter(s).
8. Neuberg Supratech Reference Laboratories (NSRL) Ahmedabad is accredited by ICMR and NABL for COVID-19 testing.

CONDITIONS OF REPORTING

- All laboratory investigations have their limitations which are imposed by the limits of sensitivity and specificity of individual assay procedures as well as the quality of the specimen received by the laboratory. Isolated laboratory investigations never confirm the final diagnosis of the disease, but only help in arriving at a diagnosis in conjunction with clinical presentation and other related investigations.
- The result(s) relate only to the sample(s) received.
- The test report shall not be reproduced except in full, without written approval of the Neuberg Suprattech Reference Laboratory (NSRL).
- For any query in the report, it is suggested to contact the concerned laboratory personnel as suggested in the table to help carry out follow-up action (rechecking, repeat sampling, reflex/confirmatory testing, etc.). Neuberg Suprattech Reference Laboratories (NSRL) follows a procedure of retaining & preserving samples after testing for a stipulated period. After the retention period of the sample, a fresh specimen is requested.
- Report results are for the information of the referring doctor only.
- For tests performed on specimens received from non - Neuberg Suprattech Reference Laboratory (NSRL) locations (within and outside Ahmedabad) it is presumed that the specimen belongs to the patient named or identified, such verification having been carried out at the point of generation of the said specimen.
- A test requested might yield 'INCOMPLETE RESULTS' for various technical reasons and this response will appear against the test name followed by detailed comment at the end of the report. It is expected that a fresh specimen will be sent for the purpose of reporting on the same parameter(s).

3. Neuberg Suprattech Reference Laboratories (NSRL) Ahmedabad is accredited by ICMR and NABL for COVID-19 testing.

TEST	RESULTS	UNIT	BIOLOGICAL REF RANGE	REMARKS
------	---------	------	----------------------	---------

Glycated Haemoglobin Estimation

HbA1C H 6.05 % of total Hb <5.7: Normal
 5.7-6.4: Prediabetes
 >=6.5: Diabetes

Estimated Avg Glucose (3 Mths) 126.93 mg/dL
Calculated

Please Note change in reference range as per ADA 2021 guidelines.

Interpretation :

HbA1C level reflects the mean glucose concentration over previous 8-12 weeks and provides better indication of long term glycemic control. Levels of HbA1C may be low as result of shortened RBC life span in case of hemolytic anemia. Increased HbA1C values may be found in patients with polycythemia or post splenectomy patients. Patients with Homozygous forms of rare variant Hb(CC,SS,EE,SC) HbA1c can not be quantitated as there is no HbA. In such circumstances glycemic control can be monitored using plasma glucose levels or serum Fructosamine. The A1c target should be individualized based on numerous factors, such as age, life expectancy, comorbid conditions, duration of diabetes, risk of hypoglycemia or adverse consequences from hypoglycemia, patient motivation and adherence.

TEST	RESULTS	UNIT	BIOLOGICAL REF RANGE	REMARKS
------	---------	------	----------------------	---------

Thyroid Function Test

Triiodothyronine (T3)	102.02	ng/dL	70 - 204	
Thyroxine (T4) CMIA	5.9	ng/dL	4.87 - 11.72	
TSH CMIA	1.455	µIU/mL	0.4 - 4.2	

INTERPRETATIONS

- Circulating TSH measurement has been used for screening for euthyroidism, screening and diagnosis for hyperthyroidism & hypothyroidism. Suppressed TSH (<0.01 µIU/mL) suggests a diagnosis of hyperthyroidism and elevated concentration (>7 µIU/mL) suggest hypothyroidism. TSH levels may be affected by acute illness and several medications including dopamine and glucocorticoids. Decreased (low or undetectable) in Graves disease. Increased in TSH secreting pituitary adenoma (secondary hyperthyroidism), PRTH and in hypothalamic disease thyrotropin (tertiary hyperthyroidism). Elevated in hypothyroidism (along with decreased T4) except for pituitary & hypothalamic disease.
- Mild to modest elevations in patient with normal T3 & T4 levels indicates impaired thyroid hormone reserves & incipient hypothyroidism (subclinical hypothyroidism).
- Mild to modest decrease with normal T3 & T4 indicates subclinical hyperthyroidism.
- Degree of TSH suppression does not reflect the severity of hyperthyroidism, therefore, measurement of free thyroid hormone levels is required in patient with a suppressed TSH level.

CAUTIONS

Sick, hospitalized patients may have falsely low or transiently elevated thyroid stimulating hormone. Some patients who have been exposed to animal antigens, either in the environment or as part of treatment or imaging procedure, may have circulating antianimal antibodies present. These antibodies may interfere with the assay reagents to produce unreliable results.

 Sample Date and Time : **22-Jul-2023 08:50** Sample Coll. By : Ref Id1 : **O0723197**
 Report Date and Time : **22-Jul-2023 10:46** Acc. Remarks : **Normal** Ref Id2 : **O323242938**

Interpretation Note:
 Ultra sensitive-thyroid-stimulating hormone (TSH) is a highly effective screening assay for thyroid disorders. In patients with an intact pituitary-thyroid axis, s-TSH provides a physiologic indicator of the functional level of thyroid hormone activity. Increased s-TSH indicates inadequate thyroid hormone, and suppressed s-TSH indicates excess thyroid hormone. Transient s-TSH abnormalities may be found in senescent ill, hospitalized patients, so this is not the ideal setting to assess thyroid function. However, even in these patients, s-TSH works better than total thyroxine (an alternative screening test), when the s-TSH result is abnormal. Appropriate follow-up tests T4 & free T3 levels should be performed. If TSH is between 5.0 to 10.0 & free T4 & free T3 level are normal then it is considered as subclinical hypothyroidism which should be followed up after 4 weeks & if TSH is > 10 & free T4 & free T3 level are normal then it is considered as overt hypothyroidism.

Serum triiodothyronine (T3) levels often are depressed in sick and hospitalized patients, caused in part by the biochemical shift to the production of reverse T3. Therefore, T3 generally is not a reliable predictor of hypothyroidism. However, in a small subset of hyperthyroid patients, hyperthyroidism may be caused by overproduction of T3 (T3 toxicosis). To help diagnose and monitor this subgroup, T3 is measured on all specimens with suppressed s-TSH and normal FT4 concentrations.

Normal ranges of TSH & thyroid hormones vary according trimester in pregnancy.
 TSH ref range in Pregnancy
 First trimester 0.24 - 2.00
 Second trimester 0.43-2.2
 Third trimester 0.8-2.5
