Parameter	Result	Unit	Biological Reference Interval
Hb A1C	5.2	% of Total Hb	>8.0 Action Suggested <7.0 Goal <6.0 Non-diabetic level
Mean Blood Glucose	109.0	mg/dL	0 - 154

METHOD - BIO-RAD HPLC

Calculated

Degree of Glucose Control Normal Range:

Poor Control >7.0% *

Good Control 6.0 - 7.0 %**Non-diabetic level < 6.0 %

* High risk of developing long term complication such as retinopathy, nephropathy, neuropathy, cardiopathy, etc.

* Some danger of hypoglycemic reaction in Type I diabetics.

* Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1c levels in this area.

HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (eAG).-

Trends in HbA1c are a better indicator of diabetic control than a solitary test.-

To estimate the eAG from the HbA1C value, the following equation is used: $eAG(mg/dl) = 28.7 * A1c - 46.7$ -

HbA1C Estimation can get affected due to .1) Anaemia .2) Chronic renal failure .3) Vitamin A .4) Vitamin C .5) HbA1c is falsely low in diabetics with

hemolytic disease Fructosamine is recommended in these patients which indicates diabetes control over 15 days .6

) Interference of Haemoglobinopathies in HbA1c estimation .A) HbF > 5%, an alternate platform (Boronate

affinity chromatography) is recommended for testing of HbA1c.B) Homozygous hemoglobinopathy is detected,

fructosamine is recommended for monitoring diabetic statusC) Heterozygous state detected (D10/ turbo is

corrected for HbS and HbC trait).Hemoglobin electrophoresis (HPLC method) is recommended for detecting hemoglobinopathy.

Interpretation :

TSH levels may be affected by acute illness and drugs like doapamine and gluco corticoids. Low or undetectable TSH is suggestive of Grave~s disease.
TSH between 5.5 to 15.0 with normal T3 T4 indicates impaired thyroid hormone or subclinical hypothyroidism or normal T3 T4 wi this lightly low TSH suggests subclinical Hyperthyroidism. TSH suppression does not reflect severity of hyperthyroidism therefore , measurement of FT3 ,FT4 is important. FreeT3 is first hormone to increase in early Hyperthyroidism. Only TSH level can prove to be misleading in patients on treatment. Therefore FreeT3 , FreeT4 along with TSH should be checked. During pregnancy clinically T3 T4 can be high and TSH can be slightly low.
