Investigation	Value	Unit	Biological Ref. Range
Glucose (Fasting) GOD-PAP	102.00	mg/dL	60.00 - 110.00

Fasting Plasma Glucose (mg/dl)	2 hr plasma Glucose (mg/dl) Post Glucose load	Diagnosis
99 or below	139 or below	Normal
100 to 125	140 to 199	Pre-Diabetes (IGT)
126 or above	200 or above	Diabetes

Reference : American Diabetes Association.

Comment :

Impaired glucose tolerance (IGT) fasting, means a person has an increased risk of developing type 2 diabetes but does not have

it yet. A level of 126 mg/dL or above, confirmed by repeating the test on another day, means a person has diabetes.

IGT (2 hrs Post meal), means a person has an increased risk of developing type 2 diabetes but does not have it yet. A 2-hour glucose level of 200 mg/dL or above, confirmed by repeating the test on another day, means a person has diabetes

Plasma Glucose Goals	For people with Diabetes
Before meal	70-130 mg/dL
2 Hours after meal	Less than 180 mg/dL
HbA1c	Less than 7%

Investigation	Value	Unit	Biological Ref. Range
Erythrocyte Sedimentation Rate (ESR) <small>Westergren's</small>	24	mm in 1hr	00 - 20

- * Test conducted on EDTA whole blood at 37 degree Celsius.
- * ESR is an index of the presence of the active diseases of many types.
- * Increased- in most infections, anaemias, injection of foreign proteins, auto-immune disorders, conditions accompanied by hyperglobunemia and hypercholesterolaemia.
- * A rising ESR suggests a progressive disease.
- * Decreased- in polycythemia, congestive heart failure.
- * ESR is a useful but nonspecific marker of underlying inflammation. C-Reactive Protein(CRP) is the recommended test in a acute inflammatory conditions.

Dr. Dhairy Soneji
M.D Path.

Note : 1. These report are mere estimation and are liable to vary / Change in different conditions in different laboratories.

Investigation	Value	Unit	Biological Ref. Range
Glycosylated Hb HPLC	5.0	%	
Average Plasma Glucose	97		

Interpretation :

HbA1c %

<=5.6	Normal
5.7-6.4	At Risk for Diabetes
>=6.5	Diabetes

Estimated Average Glucose (eAG) is a new way to understand how well you are managing your diabetes. Using eAG may help you get a better idea of how well you are taking care of your diabetes. And that can help you and your health care provider know what changes you may need to make to be as healthy as possible .

HbA1c %	5	5.5	6	6.5	7	7.5	8	8.5	9	10	11	12
(eAG) mg/dL	97	111	126	140	154	169	183	197	212	240	269	298

The HbA1c goal for people with diabetes is less than 7 percent. A 3 to 6 monthly monitoring is recommended in diabetics. People with diabetes should get the test done more often if their blood sugar stays too high or if their healthcare provider makes any change in the treatment plan. HbA1c concentration represents the integrated values for blood glucose over the preceding 6 -10 wks and is not affected by daily glucose fluctuation, exercise & recent food intake. It is a more useful tool for clinical management of *Diabetes mellitus* through routine monitoring & assesses compliance with therapeutic regimen.

Dr. Dhairy Soneji
M.D Path.

Investigation	Value	Unit	Biological Ref. Range
Blood group Gel Technique	"B" Positive		

Blood group is identified by antigens and antibodies present in the blood. Antigens are protein molecules found on the surface of red blood cells. Antibodies are found in plasma. To determine blood group, red cells are mixed with different antibody solutions to give A,B,O or AB. The test is performed by both forward as well as reverse grouping methods.

The report is of sample received. It is presumed that the sample belongs to the patient. In case of any discrepancy related to this report, contact lab.

These are group of tests that can be used to detect the presence of liver disease, distinguish among different types of liver disorders, gauge the extent of known liver damage, and monitor the response to treatment. Most liver diseases cause only mild symptoms initially, but these diseases must be detected early. Some tests are associated with functionality (e.g., albumin), some with cellular integrity (e.g., transaminase), and some with conditions linked to the biliary tract (gamma-glutamyl transferase and alkaline phosphatase). Conditions with elevated levels of ALT and AST include hepatitis A, B, C, paracetamol toxicity etc. Several biochemical tests are useful in the evaluation and management of patients with hepatic dysfunction. Some or all of these measurements are also carried out (usually about twice a year for routine cases) on those individuals taking certain medications, such as anticonvulsants, to ensure that the medications are not adversely impacting the person's liver. Reference ranges vary between laboratories

Note : The result obtained relate only to the sample given/ received & tested. A single test result is not always indicative of a disease, it has to be correlated with clinical data for interpretation

Dr. Dhairya Soneji
M.D Path.

Investigation	Value	Unit	Biological Ref. Range
<u>Kidney Function Test</u>			
Urea, Serum Urease	17	mg/dL	13.00 - 43.00
Creatinine Modified jaffe's	0.66	mg/dL	0.60 - 1.30
Uric Acid, Serum enzymatic	6.00	mg/dL	2.60 - 6.00
Calcium Arsenazo III	8.90	mg/dl	8.40 - 10.20
Phosphorus UV PHOTOMETRIC	3.62	mg/dL	2.60 - 4.50

Kidney function tests are group of tests that can be used to evaluate how well the kidneys are functioning. Creatinine is awaste product that comes from protein in the diet and also comes from the normal wear and tear of muscles of the body. Inblood, it is a marker of GFR .in urine, it can remove the need for 24-hour collections for many analytes or be used as a qualityassurance tool to assess the accuracy of a 24-hour collection Higher levels may be a sign that the kidneys are not workingproperly. As kidney disease progresses, the level of creatinine and urea in the blood increases. Certain drugs are nephrotoxicence KFT is done before and after initiation of treatment with these drugs.Low serum creatinine values are rare; they almost always reflect low muscle mass.Apart from renal failure Blood Urea can increase in dehydration and GI bleed.Reference ranges vary between laboratories.

Note : The result obtained relate only to the sample given/ received & tested. A single test result is not always indicative of a disease, it has to be correlatedwith clinical data for interpretation.

Dr. Dhairy Soneji
M.D Path.

Investigation	Value	Unit	Biological Ref. Range
Lipid Profile			
Cholesterol TOTAL CHOD-PAP	154	mg/dL	Desirable < 200 Borderline 200 - 239 High Risk >= 240
Triglycerides Glycerol Phosphate Oxidase	93	mg/dL	Normal <150 Borderline 150-199 High 200 -499 Very High >=500
DIRECT HDL Accelerator Selective Detergent	72	mg/dL	Major risk factor for heart disease < 40 Negative risk factor for heart disease =>60
VLDL Cholesterol Calculated	19	mg/dL	0.00 - 30.00
LDL Calculated	63	mg/dL	Recommended <130 Moderate Risk 130-159 High Risk >160
Total / HDL Cholesterol Ratio	2.1		Low Risk 3.3-4.4 Average Risk 4.4-7.1 Moderate Risk 7.1-11.0 High Risk >11.0
Non HDL Cholesterol Calculated	82.0	mg/dL	Adult Optimal <130 Above Optimal 130 -159 Borderline High 160-189 High 190 -219 Very High >=220

Lipid profile is a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks cardiovascular disease, certain forms of pancreatitis. Hypertriglyceridemia is indicative of insulin resistance when present with low high-density lipoprotein (HDL) and elevated low-density lipoprotein (LDL), while elevated triglyceride is a clinical risk factor for coronary artery disease (CAD), especially when low HDL is present. Very high levels of triglycerides are defined by serum levels of 500mg/dL or greater and can be concerning for development of pancreatitis. Reference range between laboratories.

2D ECHO AND COLOUR DOPPLER STUDY

MITRAL VALVE : NORMAL.
AORTIC VALVE : NORMAL.
PULMONARY VALVE : NORMAL.
TRICUSPID VALVE : NORMAL.
AORTA : ROOT: 18.00 MM AND AORTA ST JUNCTION: 24.00 MM.
NORMAL ARCH AND WHOLE AORTA FROM ORIGINE TO BIFURCATION

LA : 26 MM
LV- D/LV-S : 36/20 MM.
LVEF : 76 %, NO RWMA AT REST.
IVS : INTACT, IVS: 10.00 MM.
IAS : INTACT, PW: 10.00 MM.
AOVP : 1.64 M/SEC. PVP: 0.84 M/SEC.
RA AND RV : NORMAL, PA: NORMAL.
RVSP : TR JET + RA MEAN PRESSURE: 28 MM HG TAPSE: 20.60 MM
COLOR DOPPLER STUDY : NO MR, TRIVIAL TR, PR : NO , TRIVIAL AR.
NO AS, NO MS, NO TS, NO PS.
ALL VLVES ARE NORMAL WITH NORMAL HEMODYNAMIC.

MVIS : VE/VA > 1,
NO PERICARDIAL EFFUSION. .
NO VSR, NO SCAR, NO CLOT, NO VEGETATION.
NO THROMBUS IN LV/LVA.

No report

Referred By :ROHA HEALTH CARE

USG ABDOMEN & PELVIS.

LIVER : Appears normal in size and echotexture. No e/o focal or diffuse lesion seen. No evidence of dilated IHBR. PV and CBD appear normal in calibre.

GALL BLADDER :Appears normal. No evidence of stone or cholecystitis seen.

PANCREAS : Appears normal in size and echotexture. No focal mass lesion or changes of pancreatitis seen.

SPLEEN : Appears normal in size and echotexture. No evidence of focal or diffuse lesion.

BOTH KIDNEYS : Appear normal in size and echotexture with preservation of corticomedullary differentiation. No evidence of calculus, hydronephrosis or mass lesion involving Either kidney.

RK: 10 x 4 cm LK: 10.4 x 4.6 cm

URINARY BLADDER : appears normal. No intrinsic lesion seen.

UTERUS: Appears normal in size and measures 6.9 x 2.8 cm and show normal echotexture. Endometrial thickness is 5.3 mm.

Both adnexa appear normal. No e/o adnexal mass lesion.No evidence of ascites or paraaortic lymphadenopathy.

CONCLUSION:

*** NORMAL SONOGRAPHY STUDY OF LIVER, GB, PANCREAS, SPLEEN, BOTH KIDNEYS, U.BLADDER, UTERUS AND BOTH ADENEXA.**

ADV: Clinical correlation and further investigation.Thanks for ref...
