HAEMATOLOGY

results	unit	reference
---------	------	-----------

ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate)	06	mm/1hr	00 - 22
--------------------------------------	----	--------	---------

Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

BIOCHEMISTRY

results	unit	reference
---------	------	-----------

BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F)	96.8	mg/dl	70 - 110
-----------------	------	-------	----------

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

Serum Albumin	4.39	gm%	3.50 - 5.20
Globulin	2.08	gm/dl	1.8 - 3.6
Albumin/Globulin Ratio	2.11	%	

INTERPRETATION

A Liver Function test or one or more of its component tests may be used to help diagnose liver disease if a person has symptoms that indicate possible liver dysfunction. If a person has a known condition or liver disease, testing may be performed at intervals to monitor liver status and to evaluate the effectiveness of any treatments.

	results	unit	reference
LIPID PROFILE, Serum			
S. Cholesterol	189.0	mg/dl	< - 200
HDL Cholesterol	55.5	mg/dl	35.3 - 79.5
LDL Cholesterol	113.8	mg/dl	50 - 150
VLDL Cholesterol	19.6	mg/dl	00 - 40
Triglyceride	98.1	mg/dl	00 - 170
Chloestrol/HDL RATIO	3.4	%	

INTERPRETATION:

Lipid profile Of lipid panel IS a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.

BLOOD SUGAR (PP), Serum

SUGAR PP	116.3	mg/dl	80 - 140
----------	-------	-------	----------

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

TEST NAME

VALUE

ABO

"O"

Rh

POSITIVE

Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell s surface that are responsible for the ABO types. Blood group is further classified as RH positive an RH negative.

DIAGNOSTICS

Patient Name : Mr. VIJENDER DEO	Registration No
Age/Sex	Registered
Patient ID	Collection
Barcode	Received
Ref. By	Reported
SRF No.	Panel
Aadhar-Nation	Passport No.

Test Name	Value	Unit	Bio Ref.Interval
THYROID PROFILE.(TFT)SERUM*			
T3 ,Serum	117.00	ng/dl	69-215
T4 ,Serum	8.30	ug/dL	5.2-12.7
ECLIA TSH(ultrasensitive) ECLIA	2.9	uIU/mL	0.3-4.5

TSH	T3 / FT3	T4 / FT4	Suggested Interpretation for the Thyroid Function Tests Pattern
Within range	Decreased	Within range	Isolated Low T3-often seen in elderly & associated non-thyroidal illness. In elderly the drop in T3 level can be upto 25%.
Raised	Within range	Within Range	Isolated high TSH especially in the range of 4.7 to 15 mIU/ml is commonly associated with physiological & biological TSH variability.
			Subclinical Autoimmune Hypothyroidism
			Intermittent T4 therapy for hypothyroidism
			Recovery phase after non-thyroidal illness"
Raised	Decreased	Decreased	Chronic Autoimmune Thyroiditis
			Post thyroidectomy, post radioiodine
			Hypothyroid phase of transient thyroiditis"
			Interfering antibodies to thyroid hormones (anti-TPO antibodies)
Raised or within range	Raised	Raised / Normal	Intermittent T4 therapy or T4 overdose Drug interference- Amiodarone, Heparin,Beta blockers,steroids, anti-epileptics

DIAGNOSTICS

Patient Name : Mr. VIJENDER DEO	Registration No
Age/Sex : 35 Y/Male	Registered : 12/Nov/2022
Patient ID : 012211120032	Collection : 12/Nov/2022 02:47PM
Barcode : 10124738	Received : 12/Nov/2022 02:58PM
Ref. By : Self	Reported : 12/Nov/2022 05:30PM
SRF No. :	Panel : SJM Hospital
Aadhar-Nation : - Indian	Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
HbA1C(Glycosylated Hemoglobin):EDTA			
Hb A1C, GLYCOSYLATED Hb ,EDTA HPLC	5.30	%	
Average Glucose Calculated	105.41	mg/dL	<125.0

Interpretation:
AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 - 7 %
FAIR CONTROL	7 - 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

Comment :
Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.
ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.

Aadhar-Nation : - Indian	Passport No. :

Test Name	Value	Unit	Bio Ref.Interval
<p>3.Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targetting a goal of < 7.0% may not be appropriate.</p> <p>4.High HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications</p> <p>5.Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.</p> <p>6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution , given the pathological processes including anemia,increased red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term glycemc control.</p> <p>7.Specimens from patients with polycythemia or post-splenctomy may exhibit increase in HbA1c values due to a somewhat longer life span of the red cells.</p>

Date	12-11-2022 11:59 AM	Ref. Physician	SELF	CHEST, CHEST	

X-RAY CHEST PA VIEW OBSERVATION:

The lung fields are clear.

Both hila are normal.
Cardiophrenic and costophrenic angles are normal.
The trachea is central.

The mediastinal and cardiac silhouette are normal.
Cardiothoracic ratio is normal.
Bones of the thoracic cage are normal.

Soft tissues of the chest wall are normal.

IMPRESSION:

- No significant abnormality seen.

Ultrasound Report

Name :Mr.Vijender Deo

Age/Sex:35Yrs./M

Date:12/11/2022

Ultrasound - Male Abdomen

Liver: Liver appears normal in size. There is no evidence of any focal lesion seen in the parenchyma. Intra-hepatic vascular and biliary radicles appear normal. Portal vein and common bile duct are normal.

GALL BLADDER: Gall bladder is physiologically distended. The wall thickness is normal. There is no Evidence of any intraluminal mass lesion or calculi seen.

PANCREAS: Pancreas is normal in size, shape and echo pattern. No focal mass lesion seen. Pancreatic duct is not dilated.

SPLEEN: Spleen show normal in size, shape and homogeneous echopattern. No focal mass lesion is seen in parenchyma.

KIDNEYS: Both the kidneys are normal in size, shape, position and axis. Parenchymal echopattern is normal bilaterally. No focal solid or cystic lesion is seen. There is no evidence of renal calculi on either side

PARAAORTIC REGIONS: Any mass/ lymph nodes:-- no mass or lymph nodes seen.

URINARY BLADDER: Adequately distended. Wall were regular and thin. Contents are Normal. No stone formation seen.

PROSTATE: Normal in shape and position. Parenchymal echotexture is normal. No free ascetic fluid or pleural effusion seen.

IMPRESSION: NORMAL SCAN.
