Test Name	Result	Unit	Biological Ref Interval
HbA1c (glyco HB) Method:HPLC	5.7	%	4.0 - 5.7

EXPECTED VALUES :-

Guidance for Non diabetics	
Metabolically healthy patients	4.0 - 6.0 %
Good Control	6.0 - 7.0 %
Fair Control	7.0 - 8.0 %
Poor Control	> 8.0 %

Reference Range as per ADA Guidelines	
Below 5.7 %	Normal
5.8 - 6.4 %	Pre-diabetic
≥ 6.5 %	Diabetic

REMARKS :-

In vitro quantitative determination of HbA1c in whole blood is utilized.
In long term monitoring of glycemia. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6 - 8 weeks) and therefore provides determination of blood glucose or urinary glucose. It is recommended that the determination of HbA1c be performed at intervals of 4 - 6 weeks during diabetes mellitus therapy. Result of HbA1c should be assessed in conjunction with the patient's medical history clinical examination and other findings.

BIOCHEMISTRY

INVESTIGATION	RESULTS	UNITS	REFERENCE RANGE
LIPID PROFILE.(TOTAL CHOLESTEROL,LDL,HDL,TRIGLYCERIDES)			
LIPID PROFILE			
CHOLESTEROL	230	mg/dl	150-250
TRIGLYCERIDE	115	mg/dl	40-150
HDL	42	mg/dl	30-80
LDL	165	mg/dl	60-130
VLDL	23	mg/dl	0 - 30
LDL/HDL RATIO	3.93		0 - 3.55
T. CHOLESTROL/HDL RATIO	5.48	H	0 - 3.3

*** End Of The Report ***

TRIGLYCERIDE level > 250mg/dL is associated with an approximately 2-fold greater risk of coronary vascular disease.Elevation of triglycerides can be seen with obesity, medication, fast less than 12 hrs., alcohol intake, diabetes melitus,and pancreatitis.

CHOLESTEROL, its fractions and triglycerides are the important plasma lipids in defining cardiovascular risk factors and in the management of cardiovascular disease.Highest acceptable and optimum values of cholesterol values of cholesterol vary with age. Values above 220 mgm/dl are associated with increased risk of CHD regardless of HDL & LDL values.

HDL-CHOLESTEROL level <35 mg/dL is associated with an increased risk of coronary vascular disease even in the face of desirable levels of cholesterol and LDL - cholesterol.

L - CHOLESTEROL& TOTAL CHOLESTEROL levels can be strikingly altered by thyroid, renal and liver disease as well as hereditary factors.Based on total cholesterol, LDL- cholesterol, and total cholesterol/HDL - cholesterol ratio, patients may be divided into the three risk categories

Test Name	Result	Unit	Biological Ref Interval
-----------	--------	------	-------------------------

TUMOR MARKER

1539-PSA PROSTATIC SPECIFIC ANTIGEN	0.97	ng/ml	
-------------------------------------	------	-------	--

Sandwich Direct CLIA

EXPECTED VALUES :

99% :	of Healthy males	0.0-4.0 ng/ml
80% :	of Benign prostatic hypertrophy	0.0-4.0 ng/ml
81% :	of Prostatic Carcinoma	Above 4.0 ng/ml

PSA is reliable tumor marker for already diagnosed prostatic carcinoms. It is uniquely associated only with prostatic tissue, and therefore is specific for it. Baseline levels measured prior to therapeutic intervention and followed later by serial periodical measurements with predict the outcome of therapy. It is also helps in early discovery of recurrences, relapses and metastases.

RECOMMENDED TESTING INTERVALS :

First Determination	: Preoperatively (Baseline)
Second Determination	: 2-4 days Postoperatively
Third Determination	: Before discharge from hospital
Follow-up Determinations	:
If levels are high/show rising trend	: Monthly
If levels are normal	: Every 3 monthly initially, later annually.

In general, tumor marker levels are directly proportional to the tumor mass and the stage of the cancer. However, it is the rate of change of the tumor marker level which is more important, rather than its absolute value. A 50% change may be considered clinically significant. It must be emphasised that PSA may also be elevated in benign prostatic hypertrophy and inflammatory conditions of the surrounding genito urinary tract. Therefore, this parameter should never be used as a screening test for test diagnosing prostatic carcinoma.

1559-THYROID PROFILE

1560-TOTAL TRIIODOTHYRONINE (T3)	0.94	ng/ml	0.60 - 1.81
Direct Chemiluminometric Technology			
1561-TOTAL THYROXINE (T4)	8.1	ug/dl	5.5 - 12.5
Direct Chemiluminometric Technology			
1562-THYROID STIMULATING HORMONES (TSH)	1.43	uIU/ml	0.50 - 5.00
Sandwich CLIA

Comment :-

TSH is secreted by pituitary gland. It signals thyroid gland to release thyroid hormone (T3 & T4) in blood. The TSH levels are inversely related to T3 & t4 levels. In primary hypothyroidism TSH levels are high while T3 & T4 levels are low whereas in primary hyperthyroidism TSH levels are low with high T3& T4 levels. A low T3 & T4 in the presence of low or normal TSH indicates hypothalamic or pituitary dysfunction. A high TSH in the presence of normal or high T4 Suggests inappropriate TSH secretion. Increased levels of TSH are seen in primary hypothyroidism, inappropriate TSH secretion, systemic illness and rarely in TSH secreting pituitary tumours (secondary hyperthyroidism). Decreased levels of TSH are seen in secondary hypothyroidism, primary hyperthyroidism.

INTERPRETATION:

Serum T3,T4,TSH measurements from the three components of Thyroid screening panel.

TRIODOXYTHYRONINE (T3)

INCREASED LEVELS are seen in graves disease,T3 thyrotoxicosis,Thyroid hormone resistance,Functional thyroid adenoma.
DECREASED LEVELS are seen IN Nonthyroidal illness,Hypothyroidism (one third cases)

THYROXINE (T4) - Normal T4 levels accomplished by elevated T3 levels seen in T3 Thyroxiosis.

INCREASED LEVELS are seen in hyperthyroidism,Thyroid hormone resistance.
DECREASED LEVELS are seen in Primary hypothyroidism,secondary hypothyroidism.

THYROID STIMULATING HORMONE (TSH)

The TSH levels are inversely related to T3 & T4 levels. In primary hypothyroidism TSH levels are high while T3&T4 levels are low whereas in primary hyperthyroidism TSH levels are low with high T3&T4 levels.A low T3 & T4 in the presence of low or normal TSH indicates hypothalamic or pituitary dysfunction. A high TSH in th presence of normal or high T4 suggests in appropriated TSH secretion.

INCREASED LEVELS are seen in primary hypothyroidism, inappropriate TSH secretion, systemic illness,rarely in TSH secretion.

USG WHOLE ABDOMEN

Liver is normal in size *and shows diffuse increased echogenicity s/o fatty infiltration (Grade-I)*. No apparent focal lesion is seen. The intrahepatic biliary radicals are not dilated. Portal vein is normal in diameter.

Gall bladder is adequately distended. Wall thickness is normal. *Lumen shows mild sludge*. CBD is normal in caliber with clear lumen.

Pancreas appears normal in size and echotexture.

Spleen appears normal in size and shows echotexture.

Both kidneys appears normal in size, shape and echotexture. No mass lesion is seen.

Both kidneys show normal parenchymal echotexture.

Cortical thickness and corticomedullary differentiation is maintained.

No apparent calculus / hydronephrosis is seen on both sides.

Urinary bladder is *partially distended*. Wall thickness is normal.

Prostate appears *enlarged in size and prostatic vol is 33 cc*.

No significant lymphadenopathy is noted. No free fluid is seen.
