Date of Birth/ Age: 36YRS	
Gender: MALE	
Referred By: SELF	

Bilateral lung fields are grossly unremarkable

Cardiac silhouette is normal in size.

Bilateral costophrenic angles and bilateral domes of the diaphragm are normal.

Bony cage & soft tissues are grossly normal

Please correlate clinically.

ABSOLUTE BASOPHIL COUNT Calculated	0.03	10 ³ /μL	0.02-0.10
ESR [WESTERGREN] Sedimentation	12.00	mm/1st	0-15

INTERPRETATION:

A complete blood count (CBC), also known as a full blood count (FBC), is a set of medical laboratory tests that provide information about the cells in a person's blood. The CBC indicates the counts of white blood cells, red blood cells and platelets, the concentration of hemoglobin, and the hematocrit (the volume percentage of red blood cells). The red blood cell indices, which indicate the average size and hemoglobin content of red blood cells, are also reported, and a white blood cell differential, which counts the different types of white blood cells, may be included. The CBC is often carried out as part of a medical assessment and can be used to monitor health or diagnose diseases. The results are interpreted by comparing them to reference ranges, which vary with sex and age. Conditions like anemia and thrombocytopenia are defined by abnormal complete blood count results. The red blood cell indices can provide information about the cause of a person's anemia such as iron deficiency and vitamin B12 deficiency, and the results of the white blood cell differential can help to diagnose viral, bacterial and parasitic infections and blood disorders like leukemia. Not all results falling outside of the reference range require medical intervention.

HAEMATOLOGY

Test Description	Observed Value	Unit	Reference Range
------------------	----------------	------	-----------------

BLOOD GROUP ABO & RH

ABO Gel Columns agglutination	B		
Rh Typing Gel agglutination	POSITIVE		

COMMENTS:

The test will detect common blood grouping system A, B, O, AB and Rhesus (RhD). Unusual blood groups or rare subtypes will not be detected by this method. Further investigation by a blood transfusion laboratory, will be necessary to identify such groups.

Disclaimer: There is no trackable record of previous ABO & RH test for this patient in this lab. Please correlate with previous blood group findings.

BIOCHEMISTRY

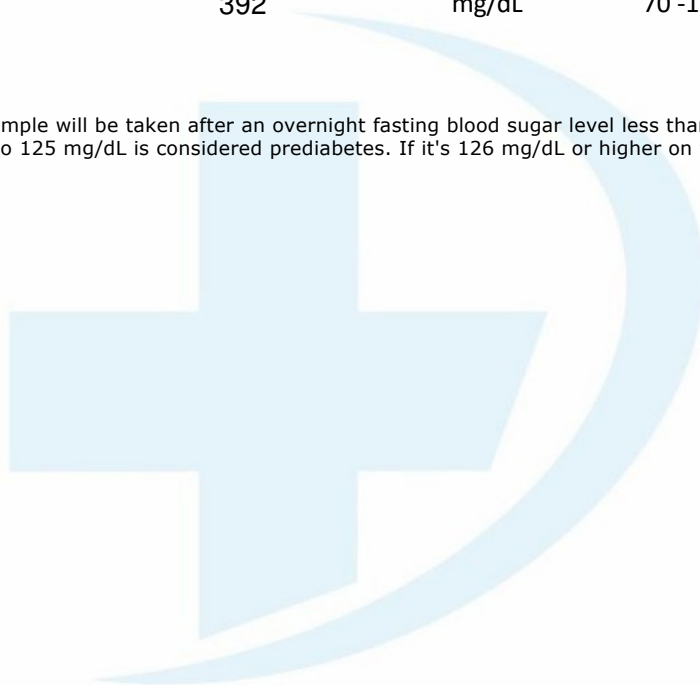

Test Description	Observed Value	Unit	Reference Range
------------------	----------------	------	-----------------

FASTING BLOOD SUGAR

Plasma Glucose Fasting Glucose Oxidase/Peroxidase	392	mg/dL	70 -110
--	-----	-------	---------

INTERPRETATION:

Fasting blood sugar test. A blood sample will be taken after an overnight fasting blood sugar level less than 100mg/dL is normal. A fasting blood sugar level from 100 to 125 mg/dL is considered prediabetes. If it's 126 mg/dL or higher on two separate tests, you have diabetes.

Sample Type	: Serum		

BIOCHEMISTRY

Test Description	Observed Value	Unit	Reference Range
------------------	----------------	------	-----------------

TOTAL CHOLESTEROL

TOTAL CHOLESTEROL Cholesterol Oxidase,PAP	182	mg/dl	<200 Desirable~200 – 239 Borderline >240 High Risk
--	-----	-------	---

CREATININE

SERUM CREATININE Enzymatic	0.86	mg/dL	0.7-1.30
-------------------------------	------	-------	----------

Increased In:

- Diet: ingestion of creatinine (roast meat), Muscle disease: gigantism, acromegaly,
- Impaired kidney function.

Decreased In:

- Pregnancy: Normal value is 0.4-0.6 mg/dL. A value >0.8 mg/dL is abnormal and should alert the clinician to further diagnostic evaluation.
- Creatinine secretion is inhibited by certain drugs (e.g., cimetidine, trimethoprim).

UREA

SERUM UREA Serum,Urease GLDH	30.68	mg/dL	19.0 - 45.0
---------------------------------	-------	-------	-------------

SGPT (ALT)

S.G.P.T UV without P5P	53	U/L	0-35
---------------------------	----	-----	------

ALT is commonly measured as a part of a diagnostic evaluation of hepatocellular injury, to determine liver health.
