### HAEMATOLOGY

results	unit	reference
---------	------	-----------

#### ESR / ERYTHROCYTE SEDIMENTATION RATE

ESR (Erythrocyte Sedimentation Rate)	06	mm/1hr	00 - 22
--------------------------------------	----	--------	---------

##### Comments

The ESR is a simple non-specific screening test that indirectly measures the presence of inflammation in the body. It reflects the tendency of red blood cells to settle more rapidly in the face of some disease states, usually because of increases in plasma fibrinogen, immunoglobulins, and other acute-phase reaction proteins. Changes in red cell shape or numbers may also affect the ESR.

### BIOCHEMISTRY

results	unit	reference
---------	------	-----------

#### BLOOD SUGAR F, Sodium Fluoride Pla

Blood Sugar (F)	92.4	mg/dl	70 - 110
-----------------	------	-------	----------

##### Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions.

High levels of serum glucose may be seen in case of Diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents.

Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

#### INTERPRETATION

A Liver Function test or one or more of its component tests may be used to help diagnose liver disease if a person has symptoms that indicate possible liver dysfunction. If a person has a known condition or liver disease, testing may be performed at intervals to monitor liver status and to evaluate the effectiveness of any treatments.

#### Comments:

Human red blood cell antigens can be divided into four groups A, B, AB AND O depending on the presence or absence of the corresponding antigens on the red blood cells. There are two glycoprotein A and B on the cell s surface that are responsible for the ABO types. Blood group is further classified as RH positive an RH negative.

Hb A1C, GLYCOSYLATED Hb ,EDTA HPLC	5.40	%	
Average Glucose Calculated	108.28	mg/dL	<125.0

**Interpretation:**

AS PER AMERICAN DIABETES ASSOCIATION (ADA)

REFERENCE GROUP	HbA1c IN %
NON DIABETIC	< 6.0 %
GOOD CONTROL	6 - 7 %
FAIR CONTROL	7 - 8 %
ACTION SUGGESTED	FOR MORE THAN 8 %

Result done on : Tosoh Automated Glycohemoglobin Analyzer.

**Comment :**

Glycosylated Hb is a normal adult Hb which is covalently bounded to a glucose molecule. Glycosylated Hb concentration is dependent on the average blood glucose concentration and is stable for the life of the RBC (120 days). Glycohaemoglobin serves as suitable marker of metabolic control of diabetics. Its estimation is unaffected by diet, insulin, exercise on day of testing and thus reflects average blood glucose levels over a period of last several weeks /months. There is a 3 - 4 week time before percent Glycohaemoglobin reflects changes in blood glucose levels.

ADA criteria for correlation between HbA1c & Mean plasma glucose levels.

1. Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliance with therapeutic regimen in diabetic patients.
2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbA1c. Converse is true for a diabetic previously under good control but now poorly controlled.
