<u>TEST DESCRIPTION</u>	<u>RESULT</u>	<u>UNITS</u>	<u>REFERENCE RANGE</u>
Prostate Specific Antigen- Total (PSA Total) (Method: Electrochemiluminescent Immunoassay)	0.87	ng/mL	0 - 4

Comments:

*Prostate-Specific Antigen (PSA) is a protein produced by normal prostate cells. This enzyme participates in the dissolution of the seminal fluid coagulum and plays an important role in fertility. **The amounts of PSA are found in the seminal fluid: some PSA escapes the prostate and can be found in the serum.

***Rising level of PSA in serum are associated with prostate cancer. The PSA level also tends to rise in men with benign prostatic hyperplasia (BPH) and is a good marker for prostate volume. PSA levels are usually elevated in men with acute bacterial prostatitis.

PSA Increases in-

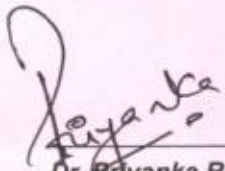

- Prostatic cancer
- Prostatitis
- Urinary Tract Infection
- Prostate Biopsy
- Benign Prostatic Hyperplasia (BPH)
- Following Catheterisation
- After Per Rectal Exam

PSA Decreases in-

- Taking drugs such as Finasteride or Dutasteride (used to treat BPH)

Kindly correlate with clinical condition.
