BIO CHEMISTRY

Investigation Name	Type of Sample	Result	Units	Biological Ref. Range
--------------------	----------------	--------	-------	-----------------------

*Glycosylated Haemoglobin (HbA1C)

Glycosylated Haemoglobin (HbA1C)		5.57	%	4.8 - 5.9
----------------------------------	--	------	---	-----------

Remarks:

(Gen-3)

Interpretation:-

According to the recommendations of the American Diabetes Association,

Values within 5.7 - 6.4% - may be at risk of developing diabetes.

HbA1C (DCCT/NGSP)

Values above 6.5% - are suitable for the diagnosis of diabetes mellitus.

HbA1C (DCCT/NGSP)

Diabetic patients with HbA1C levels below 7% (DCCT/NGSP) meet the goal of the American Diabetes Association.

Therapeutic action is suggested at levels above 8% HbA1C (DCCT/NGSP).

HbA1C levels may reach 20% (DCCT/NGSP) or more in poorly controlled diabetes.

HbA1C levels below the established reference range may indicate recent episodes of hypoglycaemia, the presence of Hb variants, or shortened lifetime of erythrocytes.

Investigation Name	Type of Sample	Result	Units	Biological Ref. Range

INTERPRETATION & CONCLUSION:

LA/AO is ratio is normal.

No thrombus /vegetation

LV is of normal size with normal systolic function (EF= 60%) Normal LV diastolic function.

LV shows no regional wall motion abnormality

RV is of normal size and has normal function

Pericardium is normal. There is no pericardial effusion.

No SAM/MVP

IAS and IVS are intact

Doppler flow velocities are normal across mitral, aortic, pulmonary and tricuspid valves.

Color Doppler flow study shows normal pattern across valves and chambers. No regurgitation.

FINAL IMPRESSION:

Normal LV systolic function

Normal LV diastolic function.

No RWMA.

LVEF- 60%

Trace MR

Trace TR

No PE/Veg/Clot

Observations

Visualized lung fields Appear normal.

Both hila are normal.

Cardiophrenic and costophrenic angles are normal.

The trachea is central.

The mediastinal and cardiac silhouette are normal.

Cardiothoracic ratio is normal.

Bones of the thoracic cage are normal.

Soft tissues of the chest wall are normal.

Impression: No significant abnormality seen.

Advice: Please correlate clinically.

Ultrasound Whole Abdomen

The diaphragm is normal in contour and respiratory excursion.

There is no pleural, subphrenic, abdominal or pelvic fluid collection seen.

There is no enlarged celiac, mesenteric or para aortic lymph nodes.

The liver is normal in size & echotexture is homogeneous. No echo rich or poor lesion is present in lobes of liver. Intrahepatic biliary radicles are not dilated. IVC, hepatic vein and portal vein are normal.

The gall bladder is distended. Its wall is not thickened.

The common bile duct is normal. There are no biliary calculi.

The pancreas and spleen are normal in size, shape and echotexture.

Right kidney is normal in size (90 x 36 mm), shape, position and echotexture. Renal outline is smooth with normal parenchymal thickness seen. Cortico-medullary differentiation is maintained. Pelvicalyceal system is not dilated. No calculus or perinephric collection is seen.

Left kidney is normal in size (92 x 38 mm), shape, position and echotexture. Renal outline is smooth with normal parenchymal thickness seen. Cortico-medullary differentiation is maintained. Pelvicalyceal system is not dilated. No calculus or perinephric collection is seen.

The urinary bladder is normal. No focal lesion is seen.

Anteverted uterus measures 92 x 48 mm. Myometrium is normal. Endometrium is 12.6 mm.

Left ovary shows a thick walled cyst of size 39.5 x 35 mm with dense echoes.

A cyst of size 45 x 31 mm is seen in the Pouch of Douglas.

Cervical canal is normal.

TVS is suggested. *for further eval*
