#### SEROLOGY

Test	Result	Unit	BRI/RangeValue
TOTAL PSA	0.52	ng/mL

Comment :

The fact of PSA is unique to prostate tissue makes it a suitable marker for monitoring men with cancer of the prostate. PSA is also useful for determining possible recurrence after therapy. Measurement of serum PSA levels is not recommended as a screening procedure for the diagnosis of cancer because elevated PSA levels also are observed in patients with benign prostatic hypertrophy.

Hb A1c assay has been validated as a reliable indicator of mean blood glucose levels for a period of 8-12 week period. American Diabetic Association recommends the testing twice a year in patients with good control and quarterly in other cases. Results of HbA1C should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.
