### ULTRASONOGRAPHY OF WHOLE ABDOMEN

#### **LIVER:**

It is normal in size (12.29 cm) with normal in shape, outline and echotexture. There is no focal area of altered echogenicity. Portal vein at porta measures 10.8 mm.

#### **GALL BLADDER:**

It is normally distended. Its wall thickness is within normal limits. No obvious intraluminal calculus or mass is seen.

#### **BILIARY TREE:**

IHBR- not dilated. The common duct at porta hepatis measures 3 mm. Visualized lumen appears clear.

#### **PANCREAS:**

It is normal in shape, size, outline and echotexture. MPD is not dilated. No focal lesion seen.

#### **SPLEEN:**

It is normal in shape, size, outline and echotexture. Spleno-portal axis is patent and normal in dimensions. Splenic span is 8.62 cm. No focal lesion seen.

#### **KIDNEYS:**

Right kidney measures 10.89 cm. Right kidney is normal in shape, size, position and echotexture. The cortical thickness is within normal limits. The cortico-medullary differentiation is intact. There is no hydronephrosis/calculus seen.

Left kidney measures 9.75 cm. Left kidney is normal in shape, size, position and echotexture. The cortical thickness is within normal limits. The cortico-medullary differentiation is intact. There is no hydronephrosis/calculus seen.

#### **URINARY BLADDER:**

It is normal in capacity and contour. The bladder wall is normal. There is no obvious intravesical calculus or mass.
