IMMUNOLOGY

Test Name	Value	Status	Unit	Biological Ref Interval
T3	1.03		ng/ml	0.87 - 1.78
T4	7.40		ug/dl	4.82 - 15.65
TSH	2.631		micro U/ml	0.340 - 5.600

TSH levels may be affected by acute illness and drugs like dopamine and gluco corticoids.

Low or undetectable TSH is suggestive of Grave's disease

TSH between 5.5 to 15.0 with normal T3,T4 indicates impaired thyroid hormone or subclinical hypothyroidism or normal T3,T4 with slightly low TSH suggests subclinical hyperthyroidism

TSH suppression does not reflect severity of hyperthyroidism therefore, measurement of FT3,FT4 is important.

Free T3 is first hormone to increase in early hyperthyroidism.
Only TSH level can prove to be misleading in patients on treatment.

Therefore Free T3, Free T4 along with TSH should be checked.
During pregnancy clinically T3T4 can be high and TSH can be slightly low.

	Test Authenticated at : 12/04/2023 16:50:36	

IMMUNOLOGY

Test Name	Value	Status	Unit	Biological Ref Interval
PSA	1.16		ng/ml	0.00 - 4.00

40-49 years = 0 to 2.5 ng/ml
50-59 years = 0 to 3.5 ng/ml
60-69 years = 0 to 4.5 ng/ml
70-79 years = 0 to 6.5 ng/ml

Note:

1. This test is not solely recommended to screen prostate cancers in the general population.
2. False negative/ positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy.
3. PSA Total and free levels may appear consistently elevated/ depressed due to the interference by heterophilic antibodies & nonspecific protein binding.
4. PSA Total and free values obtained with different assay methods or kits cannot be used interchangeably.
5. Immediate PSA testing following digital rectal examination, ejaculation, prostatic massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as it falsely elevates Total and Free PSA levels.
6. Total and Free PSA values regardless of levels should not be interpreted as absolute evidence of the presence or clinical finding and results of other investigations.
