Note : Investigations have their limitations. Solitary radiological investigations never confirm the final diagnosis. They only help in diagnosing the disease in correlation to clinical symptoms and other related tests. USG is known to have inter-observer variations. Further / Follow-up imaging may be needed in some case for confirmation of findings. Screening colour doppler was used in this patient to confirm the absence of renal calculus. Non-obstructive ureteric calculus or early stages of appendicitis may not be always well visualised on USG. Please interpret accordingly. Patient has been explained in detail about the USG findings, measurements and limitations. In case of any typographical error in the report, patient is requested to immediately contact the center for rectification within 7 days post which the center will not be responsible for any rectification.
