**REPORT OF USG OF WHOLE ABDOMEN**

- Liver** :- Normal in size 11.0cm with normal echotexture. No focal or diffuse lesion is seen. IHBR are not dilated. PV is normal in course and calibre with echofree lumen.
- G. Bladder** :- It is normal in shape, size & position. It is echofree & shows no evidence of calculus, mass or sludge.
- CBD** :- It is normal in calibre & is echofree.
- Pancreas** :- Normal in shape, size & echotexture. No evidence of parenchymal / ductal calcification is seen. No definite peripancreatic collection is seen.
- Spleen** :- Normal in size 7.9cm with normal echotexture. No focal lesion is seen. No evidence of varices is noticed.
- Kidneys** :- Both kidneys are normal in shape, size & position. Sinus as well as cortical echoes are normal. No evidence of calculus, space occupying lesion or hydronephrosis is seen.  
Right Kidney measures 9.7cm and Left Kidney measures 9.6cm.
- Ureters** :- Ureters are not dilated.
- U. Bladder**:- It is echofree. No evidence of calculus, mass or diverticulum is seen.
- Uterus** :- Normal in size (89mm x 56mm and anteverted in position contains a **live Foetus of about 13weeks 04 Days size. Placenta posterior. E.D.D. 26/07/23.**
- Ovaries** :- Both ovaries show normal echotexture. No any cyst/mass seen in either side. No pelvic (POD) collection is seen.
- Others** :- No ascites or abdominal adenopathy is seen.  
No free subphrenic / basal pleural space collection is seen.

**IMPRESSION:-** *A/V Gravid uterus contains a live Foetus of about 13weeks 04days size. E.D.D. - 26/07/23.*  
Otherwise normal scan.

## Report of fetal Well Being

Real time sonography of pelvis is done for fetal wellbeing.

There is evidence of single alive fetus of about 13 Weeks 04 Days gestational age in Variable presentation. Lie- Variable.

Fetus shows active cardiac flickering with normal rate (FHR - 153 /bpm) and rhythm.

Gestational parameter are as follows :

BPD - 24.4mm (14Weeks - 01Day) HC - 82.9mm(13Weeks - 04Days)

AC - 68.7mm(13Weeks -03Days) FL - 11.1mm(13Weeks - 02Days)

Average gestational age is 13 Weeks 04Days.

EDD - 26/07/23

Fetal wt.- 75gms. +/- 11gms

Liquor adequate. (Largest one vertical pocket of 3.3cm).

Placenta is posterior grade:-0

Cervix appears normal with normal appearing internal os.

Impression :- Single alive Intra uterine fetus of about 13weeks 04Days gestational age in Variable presentation at the time of scanning with adequate liquor and posterior placenta .

EDD by sonography is 26/07/23.

<b>Date</b> 22/01/2023	<b>Srl No.</b> 4	<b>Patient Id</b> 2301220004
<b>Name</b> Mrs. CHITRA KUMARI	<b>Age</b> 30 Yrs.	<b>Sex</b> F
<b>Ref. By</b> Dr.BOB		

Test Name	Value	Unit	Normal Value
BOB			
HB A1C	5.1	%	

**EXPECTED VALUES :-**

Metabolically healthy patients	=	4.8 - 5.5 % HbA1C
Good Control	=	5.5 - 6.8 % HbA1C
Fair Control	=	6.8-8.2 % HbA1C
Poor Control	=	>8.2 % HbA1C

**REMARKS:-**

In vitro quantitative determination of **HbA1C** in whole blood is utilized in long term monitoring of glycemia

The **HbA1C** level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6-8 weeks) and therefore provides much more reliable information for glycemia monitoring than do determinations of blood glucose or urinary glucose.

It is recommended that the determination of **HbA1C** be performed at intervals of 4-6 weeks during Diabetes Mellitus therapy.

Results of **HbA1C** should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

Assay performed on enhanced chemi lumenescence system ( Centaur-Siemens)

Serum T3,T4 & TSH measurements form the three components of Thyroid screening panel, useful in diagnosing various disorders of Thyroid gland function.

1. Primary hypothyroidism is accompanied by depressed serum T3 and T4 values and elevated serum TSH level.
2. Primary hyperthyroidism is accompanied by elevated serum T3 and T4 levels along with depressed TSH values.
3. Normal T4 levels are accompanied by increased T3 in patients with T3 thyrotoxicosis.

4. Slightly elevated T3 levels may be found in pregnancy and estrogen therapy, while depressed levels may be encountered in severe illness, renal failure and during therapy with drugs like propranolol and propyl thiouracil.			
5. Although elevated TSH levels are nearly always indicative of primary hypothyroidism, and may be seen in secondary thyrotoxicosis.
