REMARKS :-

Total serum T3 and T4 concentration depend upon a multiplicity of factors : Thyroid gland function and its regulation , thyroxin binding globulin (TBG) concentration , and the binding of T3 & T4 to TBG. Thus , Total T3 T4 concentration alone is not sufficient to access the clinical status.

A decrease in total T3 value is found with protein – wasting diseases , certain liver diseases and administration of testosterone , biphenyl hydration or salicylates Total T3 value may be elevated under condition such as pregnancy or administration of oral contraceptives.

High TSH levels can mean your thyroid is not making enough thyroid hormones, a condition called hypothyroidism. Low TSH levels can mean your thyroid is making too much of the hormones, a condition called hyperthyroidism. A TSH test does not explain why TSH levels are too high or too low. If your test results are abnormal, your health care provider will probably order additional tests to determine the cause of your thyroid problem.

COMMENTS :-

An ESR does not specifically diagnose any diseases, but it can provide information about whether or not there is inflammation in your body.

If your results are not in the normal range, it doesn't necessarily mean you have a medical condition that requires treatment. A moderate ESR may indicate pregnancy, menstruation, or anemia, rather than an inflammatory disease. Certain medicines and supplements can also affect your results. These include birth control, contraceptives, aspirin, cortisone, and vitamin A. Be sure to tell your health care provider about any drugs or supplements you are taking.

(METHOD : DONE BY AUTOMETED ESR ANYLAZER)
