## BLOOD GROUP

### Blood Group, ABO & RH Typing

Investigation	Observed Value	Biological Reference Interval	Unit
<b>BLOOD GROUP, ABO &amp; RH TYPING</b>			
ABO Group	"O"		
RH Factor	POSITIVE		

The test to determine your blood group is called ABO typing. Your blood sample is mixed with antibodies against type A and B blood. Then, the sample is checked to see whether or not the blood cells stick together. If blood cells stick together, it means the blood reacted with one of the antibodies.

Rhesus (Rh) factor is an inherited protein found on the surface of red blood cells. **If your blood has the protein, you're Rh positive. If your blood lacks the protein, you're Rh negative.**

## HBA1C

Investigation	Observed Value	Biological Reference Interval	Unit
HBA1c	4.82	For Screening: Diabetes: >6.5% Pre-Diabetes: 5.7% - 6.4% Non-Diabetes: < 5.7%	
Mean Blood Glucose	91.63	For Diabetic Patient: Poor Control : > 7.0 % Good Control : 6.0-7.0 %	mg/dL

### Comment

- HbA1c is an indicator of glycemic control. HbA1c represents average Glycemia over the past six to eight weeks. Glycation of Hemoglobin occurs over the entire 120 day life span of the Red Blood Cell, but within this 120 days. Clinical studies suggest that a patient in stable control will have 50% of their HbA1c formed in the month before sampling, 25% in the month before that, and the remaining 25% in months two to four.
- Mean Plasma Glucose mg/dL =  $28.7 \times A1C - 46.7$ . Correlation between HbA1c and Mean Plasma Glucose (MPG) is not "perfect" but rather only this means that to predict or estimate average glucose from HbA1c or vice-versa is not "perfect" but gives a good working ballpark estimate.
- Afternoon and evening results correlate more closely to HbA1c than morning results, perhaps because morning fasting glucose levels vary much more than daytime Glucose levels, which are easier to predict and control. As per IFCC recommendations 2007, HbA1c being reported as above maintaining traceability to both IFCC (mmol/mol) & NGSP (%) units.

## LFT

### Liver Function Test (LFT)

Investigation	Observed Value	Biological Reference Interval	Unit
<b>BILLIRUBIN</b>			
Total Bilirubin	0.62	0 - 1.2	mg/dL
Direct Bilirubin	0.18	0.0 - 0.25	mg/dL
Indirect Bilirubin	0.44	0.2 - 1	mg/dL
<b>LIVER ENZYMES</b>			
SGPT (ALT)	18.96	0 - 40	IU/L
SGOT (AST)	19.79	0 - 31	U/L
Alkaline Phosphatase	100	60 - 320	U/L
Gamma Glutamyl Transferase (GGT)	18	5 - 36	U/L
<b>SERUM PROTEINS</b>			
Total Serum Protein	6.48	6.3 - 7.9	g/dL
Serum Albumin	3.80	3.5 - 5.5	g/dL
Serum Globulin	2.68	2.5 - 3.5	g/dL
A/G Ratio	1.42	1.1 - 2.1	

#### Clinical Information:

Liver function tests, also known as liver chemistries, help determine the health of your liver by measuring the levels of proteins, liver enzymes, and bilirubin in your blood. Having abnormal results on any of these liver tests typically requires follow up to determine the cause of the abnormalities. Even mildly elevated results can be associated with liver disease. However, these enzymes can also be found in other places besides the liver.

Talk to your doctor about the results of your liver function test and what they may mean for you.

Finish				1	106	125/80	132	

### Findings:

Exercise Time 09:00 mins  
 Max HR attained 165 bpm 95 % of Target 172 bpm  
 Max BP 140/100mmHg  
 Max Workload attained 9.5 METs ( Good Effort Tolerance )  
 Reason for Test Termination: Patient Completed Test

No significant ST segment changes noted during exercise or recovery stages.  
 No Angina / Arrhythmia / S3 / Murmur  
 Final Impression: Test is negative for inducible ischaemia.
